As described in Section E.3, Cultural and Paleontological Resources, the construction activities associated with the proposed project could result in a substantial adverse change in the significance of historical architectural and archeological resources. In addition, the proposed project could disturb human remains. Implementation of Mitigation Measures M-CP-2a, M-CP-2b, and M-CP-3 would reduce the impacts to less-than-significant levels. Therefore, the proposed project would not result in a significant impact through the elimination of important examples of major periods of California history or prehistory.

The proposed project has the potential to result in significant noise and air quality impacts to sensitive receptors on and off site. Any potential adverse noise and air quality effects to sensitive receptors from the proposed project would be reduced to less-than-significant levels by implementation of the proposed mitigation measures, which address construction noise (Mitigation Measures M-NO-2), operational noise (Mitigation Measures M-NO-3), and diesel generator emissions (Mitigation Measures M-AQ-4). Therefore, the proposed project would not result in a significant noise or air quality impacts.

Both long-term and short-term environmental effects associated with the proposed project would be less than significant, as discussed under each environmental topic. Each environmental topic area includes an analysis of cumulative impacts based on land use projections, compliance with adopted plans, statutes, and ordinances, and currently proposed projects. No significant cumulative impacts from the proposed project have been identified.

Mitigation measures are discussed in greater detail below.
F. MITIGATION MEASURES AND IMPROVEMENT MEASURES

Mitigation Measures

Mitigation Measure M-CP-2a: Protect Historical Resources from Adjacent Construction Activities

The project sponsor of a development project in the Draft Plan Area and on the Adjacent Parcels shall consult with Planning Department environmental planning/preservation staff to determine whether adjacent or nearby buildings constitute historical resources that could be adversely affected by construction-generated vibration. For purposes of this measure, nearby historic buildings shall include those within 100 feet of a construction site if pile driving would be used in a subsequent development project; otherwise, it shall include historic buildings within 25 feet if heavy equipment would be used on the subsequent development project. (No measures need be applied if no heavy equipment would be employed.) If one or more historical resources is identified that could be adversely affected, the project sponsor shall incorporate into construction specifications for the proposed project a requirement that the construction contractor(s) use all feasible means to avoid damage to adjacent and nearby historic buildings. Such methods may include maintaining a safe distance between the construction site and the historic buildings (as identified by the Planning Department preservation staff), using construction techniques that reduce vibration, appropriate excavation shoring methods to prevent movement of adjacent structures, and providing adequate security to minimize risks of vandalism and fire.

Mitigation Measure M-CP-2b: Construction Monitoring Program for Historical Resources

For those historical resources identified in Mitigation Measure M-CP-2a, and where heavy equipment would be used on a subsequent development project, the project sponsor of such a project shall undertake a monitoring program to minimize damage to adjacent historic buildings and to ensure that any such damage is documented and repaired. The monitoring program, which shall apply within 100 feet where pile driving would be used and within 25 feet otherwise, shall include the following components. Prior to the start of any ground-disturbing activity, the project sponsor shall engage a historic architect or qualified historic preservation professional to undertake a pre-construction survey of historical resource(s) identified by the San Francisco Planning Department within 125 feet of planned construction to document and photograph the buildings of existing conditions. Based on the construction and condition of the resource(s), the consultant shall also establish a maximum vibration level that shall not be exceeded at each building, based on existing condition, character-defining features, soils conditions, and anticipated construction practices (a common standard is 0.2 inch per second, peak particle velocity). To ensure that vibration levels do not exceed the established standard, the project sponsor shall monitor vibration levels at each structure and shall prohibit vibratory construction activities that generate vibration levels in excess of the standard. Should vibration levels be observed in excess of the standard, construction shall be halted and alternative construction techniques put in practice, to the extent feasible. (For example, pre-drilled piles could be substituted for driven piles, if feasible based on soils conditions; smaller, lighter equipment might be able to be used in some cases.) The consultant shall conduct regular periodic inspections of each building during ground-disturbing activity on the project site. Should damage to either building occur, the building(s) shall be remediated to its pre-construction condition at the conclusion of ground-disturbing activity on the site.
Mitigation Measure M-CP-3: Archeological Testing

Based on a reasonable presumption that archeological resources may be present within the project site, the following measures shall be undertaken to avoid any potentially significant adverse effect from the proposed project on buried or submerged historical resources. The project sponsor shall retain the services of an archeological consultant from the rotational Department Qualified Archaeological Consultants List (QACL) maintained by the Planning Department archaeologist. The project sponsor shall contact the Department archaeologist to obtain the names and contact information for the next three archeological consultants on the QACL. The archeological consultant shall prepare an Addendum to the Vanished Community: Archaeological Research Design and Treatment Plan for the SF-80 Bayshore Viaduct Seismic Retrofit Project (J. McIlroy & M. Praetzellis ed. 1997).

The Addendum to the ARDTP shall have the following content:

a) Summary: Description of subsurface effect of the proposed project and of previous soils-disturbing activities;

b) Historical Development: If demographic data for the project site is absent in the discussion in the ARDTP, the addendum shall include new demographic data regarding former site occupants;

c) Identification of potential archeological resources: Discussion of any identified potential prehistoric or historical archeological resources;

d) Integrity and Significance: Eligibility of identified expected resources for listing to the CRHR; Identification of applicable Research Themes/Questions (in the ARDTP) that would be addressed by the expected archeological resources that are identified;

e) Impacts of Proposed Project;

f) Potential Soils Hazards: Update discussion for proposed project;

g) Archeological Testing Plan (if archeological testing is determined warranted): the Archeological Testing Plan (ATP) shall include:

A) Proposed archeological testing strategies and their justification

B) Expected archeological resources

C) For historic archeological resources

a) Historic address or other location identification

b) Archeological property type

D) For all archeological resources

a) Estimate depth below the surface

b) Expected integrity

c) Preliminary assessment of eligibility to the CRHR

E) ATP Map

a) Location of expected archeological resources

b) Location of expected project sub-grade impacts

c) Areas of prior soils disturbance
d) Archeological testing locations by type of testing

e) Base map: 1886/7 Sanborn Fire Insurance Co. map

The archeological consultant’s work shall be conducted in accordance with this measure at the direction of the Environmental Review Officer (ERO). All plans and reports prepared by the consultant as specified herein shall be submitted first and directly to the ERO for review and comment, and shall be considered draft reports subject to revision until final approval by the ERO. Archeological monitoring and/or data recovery programs required by this measure could suspend construction of the project for up to a maximum of four weeks. At the direction of the ERO, the suspension of construction can be extended beyond four weeks only if such a suspension is the only feasible means to reduce to a less than significant level potential effects on a significant archeological resource as defined in CEQA Guidelines Sect. 15064.5 (a)(c).

Consultation with Descendant Communities: On discovery of an archeological site208 associated with descendant Native Americans, the Overseas Chinese, or other potentially interested descendant group an appropriate representative209 of the descendant group and the ERO shall be contacted. The representative of the descendant group shall be given the opportunity to monitor archeological field investigations of the site and to offer recommendations to the ERO regarding appropriate archeological treatment of the site, of recovered data from the site, and, if applicable, any interpretative treatment of the associated archeological site. A copy of the Final Archaeological Resources Report shall be provided to the representative of the descendant group.

Archeological Testing Program. The archeological consultant shall prepare and submit to the ERO for review and approval an archeological testing plan (ATP). The archeological testing program shall be conducted in accordance with the approved ATP. The ATP shall identify the property types of the expected archeological resource(s) that potentially could be adversely affected by the proposed project, the testing method to be used, and the locations recommended for testing. The purpose of the archeological testing program will be to determine to the extent possible the presence or absence of archeological resources and to identify and to evaluate whether any archeological resource encountered on the site constitutes an historical resource under CEQA.

At the completion of the archeological testing program, the archeological consultant shall submit a written report of the findings to the ERO. If based on the archeological testing program the archeological consultant finds that significant archeological resources may be present, the ERO in consultation with the archeological consultant shall determine if additional measures are warranted. Additional measures that may be undertaken include additional archeological testing, archeological monitoring, and/or an archeological data recovery program. No archeological data recovery shall be undertaken without the prior approval of the ERO or the Planning Department archeologist. If the ERO determines that a significant

---

208 The term “archeological site” is intended here to minimally include any archeological deposit, feature, burial, or evidence of burial.

209 An “appropriate representative” of the descendant group is here defined to mean, in the case of Native Americans, any individual listed in the current Native American Contact List for the City and County of San Francisco maintained by the California Native American Heritage Commission and in the case of the Overseas Chinese, the Chinese Historical Society of America. An appropriate representative of other descendant groups should be determined in consultation with the San Francisco Planning Department archeologist.
archeological resource is present and that the resource could be adversely affected by the proposed project, at the discretion of the project sponsor either:

A) The proposed project shall be re-designed so as to avoid any adverse effect on the significant archeological resource; or

B) A data recovery program shall be implemented, unless the ERO determines that the archeological resource is of greater interpretive than research significance and that interpretive use of the resource is feasible.

Archeological Monitoring Program. If the ERO in consultation with the archeological consultant determines that an archeological monitoring program shall be implemented the archeological monitoring program shall minimally include the following provisions:

- The archeological consultant, project sponsor, and ERO shall meet and consult on the scope of the AMP reasonably prior to any project-related soils disturbing activities commencing. The ERO in consultation with the archeological consultant shall determine what project activities shall be archeologically monitored. In most cases, any soils-disturbing activities, such as demolition, foundation removal, excavation, grading, utilities installation, foundation work, driving of piles (foundation, shoring, etc.), site remediation, etc., shall require archeological monitoring because of the risk these activities pose to potential archaeological resources and to their depositional context;

- The archeological consultant shall advise all project contractors to be on the alert for evidence of the presence of the expected resource(s), of how to identify the evidence of the expected resource(s), and of the appropriate protocol in the event of apparent discovery of an archeological resource;

- The archeological monitor(s) shall be present on the project site according to a schedule agreed upon by the archeological consultant and the ERO until the ERO has, in consultation with project archeological consultant, determined that project construction activities could have no effects on significant archeological deposits;

- The archeological monitor shall record and be authorized to collect soil samples and artifactual/ecofactual material as warranted for analysis;

- If an intact archeological deposit is encountered, all soils-disturbing activities in the vicinity of the deposit shall cease. The archeological monitor shall be empowered to temporarily redirect demolition/excavation/pile driving/construction activities and equipment until the deposit is evaluated. If in the case of pile driving activity (foundation, shoring, etc.), the archeological monitor has cause to believe that the pile driving activity may affect an archeological resource, the pile driving activity shall be terminated until an appropriate evaluation of the resource has been made in consultation with the ERO. The archeological consultant shall immediately notify the ERO of the encountered archeological deposit. The archeological consultant shall make a reasonable effort to assess the identity, integrity, and significance of the encountered archeological deposit, and present the findings of this assessment to the ERO.

Whether or not significant archeological resources are encountered, the archeological consultant shall submit a written report of the findings of the monitoring program to the ERO.

Archeological Data Recovery Program. The archeological data recovery program shall be conducted in accord with an archeological data recovery plan (ADRP). The archeological
consultant, project sponsor, and ERO shall meet and consult on the scope of the ADRP prior to preparation of a draft ADRP. The archeological consultant shall submit a draft ADRP to the ERO. The ADRP shall identify how the proposed data recovery program will preserve the significant information the archeological resource is expected to contain. That is, the ADRP will identify what scientific/historical research questions are applicable to the expected resource, what data classes the resource is expected to possess, and how the expected data classes would address the applicable research questions. Data recovery, in general, should be limited to the portions of the historical property that could be adversely affected by the proposed project. Destructive data recovery methods shall not be applied to portions of the archeological resources if nondestructive methods are practical.

The scope of the ADRP shall include the following elements:

- **Field Methods and Procedures.** Descriptions of proposed field strategies, procedures, and operations.
- **Cataloguing and Laboratory Analysis.** Description of selected cataloguing system and artifact analysis procedures.
- **Discard and Deaccession Policy.** Description of and rationale for field and post-field discard and deaccession policies.
- **Interpretive Program.** Consideration of an on-site/off-site public interpretive program during the course of the archeological data recovery program.
- **Security Measures.** Recommended security measures to protect the archeological resource from vandalism, looting, and non-intentionally damaging activities.
- **Final Report.** Description of proposed report format and distribution of results.
- **Curation.** Description of the procedures and recommendations for the curation of any recovered data having potential research value, identification of appropriate curation facilities, and a summary of the accession policies of the curation facilities.

**Human Remains and Associated or Unassociated Funerary Objects.** The treatment of human remains and of associated or unassociated funerary objects discovered during any soils disturbing activity shall comply with applicable State and Federal laws. This shall include immediate notification of the Coroner of the City and County of San Francisco and in the event of the Coroner’s determination that the human remains are Native American remains, notification of the California State Native American Heritage Commission (NAHC) who shall appoint a Most Likely Descendant (MLD) (Pub. Res. Code Sec. 5097.98). The archeological consultant, project sponsor, ERO, and MLD shall have up to but not beyond six days of discovery to make all reasonable efforts to develop an agreement for the treatment of human remains and associated or unassociated funerary objects (CEQA Guidelines. Sec. 15064.5(d)) with appropriate dignity. The agreement should take into consideration the appropriate excavation, removal, recordation, analysis, custodianship, curation, and final disposition of the human remains and associated or unassociated funerary objects. Nothing in existing State regulations or in this mitigation measure compels the project sponsor and the ERO to accept recommendations of an MLD. The archeological consultant shall retain possession of any Native American human remains and associated or unassociated burial objects until completion of any scientific analyses of the human remains or objects as specified in the treatment agreement if such as agreement has been made or, otherwise, as determined by the archeological consultant and the ERO.

**Final Archeological Resources Report.** The archeological consultant shall submit a Draft Final Archeological Resources Report (FARR) to the ERO that evaluates the historical significance
of any discovered archeological resource and describes the archeological and historical research methods employed in the archeological testing/monitoring/data recovery program(s) undertaken. Information that may put at risk any archeological resource shall be provided in a separate removable insert within the final report.

Once approved by the ERO, copies of the FARR shall be distributed as follows: California Archaeological Site Survey Northwest Information Center (NWIC) shall receive one (1) copy and the ERO shall receive a copy of the transmittal of the FARR to the NWIC. The Environmental Planning division of the Planning Department shall receive one bound, one unbound and one unlocked, searchable PDF copy on CD of the FARR along with copies of any formal site recordation forms (CA DPR 523 series) and/or documentation for nomination to the National Register of Historic Places/California Register of Historical Resources. In instances of high public interest in or the high interpretive value of the resource, the ERO may require a different final report content, format, and distribution than that presented above.

Mitigation Measure M-NO-2: General Construction Noise Control Measures

To ensure that project noise from construction activities is minimized to the maximum extent feasible, the project’s construction contractors shall undertake the following:

- The project’s general contractor shall be required to ensure that equipment and trucks used for project construction utilize the best available noise control techniques (e.g., improved mufflers, equipment redesign, use of intake silencers, ducts, engine enclosures and acoustically-attenuating shields or shrouds, wherever feasible).

- The project’s general contractor shall be required to locate stationary noise sources (such as compressors) as far from adjacent or nearby sensitive receptors as possible, to muffle such noise sources, and to construct barriers around such sources and/or the construction site, which could reduce construction noise by as much as 5 dBA. To further reduce noise, the contractor shall locate stationary equipment in pit areas or excavated areas, if feasible.

- The project’s general contractor shall be required to use impact tools (e.g., jack hammers, pavement breakers, and rock drills) that are hydraulically- or electrically-powered wherever possible to avoid noise associated with compressed air exhaust from pneumatically-powered tools. Where use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used, along with external noise jackets on the tools, which could reduce noise levels by as much as 10 dBA.

- The following noise control requirements in specifications provided to construction contractors. Such requirements could include, but not be limited to, performing all work in a manner that minimizes noise disruption to the courts, offices, and various commercial and industrial uses to the extent feasible; use of equipment with effective mufflers; undertaking the most noisy activities during times of least disturbance to surrounding residents and occupants, as feasible; and selecting haul routes that avoid residential buildings inasmuch as such routes are otherwise feasible.

Prior to the issuance of building permits, along with the submission of construction documents, the project’s general contractor shall submit to the Planning Department and Department of Building Inspection (DBI) a list of measures to respond to and track complaints pertaining to construction noise. These measures shall include (1) a procedure and phone numbers for notifying DBI, the Department of Public Health, and the Police Department (during regular construction hours and off-hours); (2) a sign posted on-site describing noise complaint
procedures and a complaint hotline number that shall be answered at all times during construction; (3) designation of an on-site construction complaint and enforcement manager for the project; and (4) notification of Hall of Justice courts and offices on the east side of the building as well as offices and residences within 100 feet of the project construction area at least 30 days in advance of extreme noise-generating activities (defined as activities generating noise levels of 90 dBA or greater) about the estimated duration of the activity.

Mitigation Measure M-NO-3: Incorporate Noise Attenuation Measures to Achieve Acceptable Interior Noise Levels

Noise attenuation measures shall be incorporated into the building design to ensure that interior noise levels within the podular housing units do not exceed 45 dBA (L_{dn}) and are maintained at 50 dBA (L_{dn}) or below within the building’s classrooms and offices. Noise attenuation measures that could be incorporated into the building design to ensure that these performance standards can be met include the following:

- Install fixed, double-paned windows,
- Provide air space between exterior wall and interior walls,
- Design ventilation systems (including vents) to achieve interior noise levels of 45 dBA (L_{dn}), and
- Increase insulation of exterior walls.

Mitigation Measure M-AQ-4: Best Available Control Technology for Diesel Generators

The project sponsor shall ensure that the backup diesel generator meet or exceed one of the following emission standards for particulate matter: (1) Tier 4 certified engine, or (2) Tier 2 or Tier 3 certified engine that is equipped with a California Air Resources Board (ARB) Level 3 Verified Diesel Emissions Control Strategy (VDECS). A non-verified diesel emission control strategy may be used if the filter has the same particulate matter reduction as the identical ARB verified model and if the Bay Area Air Quality Management District (BAAQMD) approves of its use. The project sponsor shall submit documentation of compliance with the BAAQMD New Source Review permitting process (Regulation 2, Rule 2, and Regulation 2, Rule 5) and the emission standard requirement of this mitigation measure to the Planning Department for review and approval prior to issuance of a permit for a backup diesel generator from any City agency.

Improvement Measures

Improvement Measure I-TR-1: Transportation Demand Management (TDM) Plan

As an improvement measure to reduce vehicle miles traveled (VMT) by the proposed project and to encourage use of alternate modes, the SFDPW could develop and implement a TDM Plan as part of project approval. The following TDM measures have been identified for the proposed project, and are based on the standard Planning Department TDM Program measures:

1. Identify TDM Coordinator

The project sponsor should identify a TDM Coordinator for the project site. The TDM Coordinator would be responsible for the implementation and ongoing operation of all applicable TDM measures described below. The TDM Coordinator could be a brokered service through an existing transportation management association (e.g., the Transportation
Management Association of San Francisco, TMASF), or the TDM Coordinator could be a staff member (e.g., DPW or Sheriff’s Department facility manager). The TDM Coordinator would not have to work full-time at the project site. However, the TDM Coordinator should be the single point of contact for all transportation-related questions from facility employees and City (i.e., Planning Department) staff. The TDM Coordinator should provide TDM information to facility employees about the transportation amenities and options available at the project site (e.g., Class 1 bicycle parking spaces) and nearby (e.g., Muni bus routes).

2. Provide TDM Training for the TDM Coordinator

3. Provide Transportation and Trip Planning Information to Facility Employees and Visitors

3a. New-hire packet. Provide a transportation insert in the new-hire packet that includes information on transit service (local and regional, schedules and fares), information on where transit passes could be purchased, information on the 511 Regional Rideshare Program and nearby bike and car share programs, and information on where to find additional web-based alternative transportation materials (e.g., NextMuni phone app). This new-hire packet should be continuously updated as local transportation options change, and the packet should be provided to each new facility employee. Provide Muni maps, San Francisco Bicycle and Pedestrian maps upon request.

3b. Current transportation resources. Maintain an available supply of Muni maps, San Francisco Bicycle and Pedestrian maps, schedules, information and updates, for visitors.

3c. Posted and real-time information. A local map and real-time transit information could be installed on-site in a prominent and visible location, such as within the public lobby of the proposed RDF. The local map should clearly identify transit, bicycle, and key pedestrian routes, and also depict nearby destinations and commercial corridors. Real-time transit information via NextMuni data could be displayed on a digital screen.

4. Annually conduct a City-approved commuter survey of staff and visitors

5. City Access for Data Collection

As part of an ongoing effort to quantify the efficacy of TDM measures, City staff may need to access the project site to perform trip counts, and/or intercept surveys and/or other types of data collection. All on-site activities should be coordinated through the TDM Coordinator. DPW or Sheriff’s Department should assure future access to the site by City staff.

Improvement Measure I-TR-2: On-Street Commercial Loading Spaces

As an improvement measure to accommodate commercial loading/unloading activities for the 480-484 Sixth Street building, DPW could replace the existing driveway on Sixth Street that would be eliminated with up to two commercial loading spaces. The commercial loading/unloading spaces would need to be approved at a public hearing through the SFMTA.

Improvement Measure I-TR-3: Construction Management Plan and Public Updates

Construction Coordination – To reduce potential conflicts between construction activities and pedestrians, bicyclists, transit and vehicles at the project site, the contractor is required to
prepare a Construction Management Plan for the project construction period. The project sponsor/construction contractor(s) is also required to meet with DPW, SFMTA, the Fire Department, Muni Operations and other City agencies to coordinate feasible measures to reduce traffic congestion, and other measures to reduce potential traffic, bicycle, and transit disruption and pedestrian circulation effects during construction of the proposed project. This review considers other ongoing construction in the project area.

**Construction Truck Traffic Restrictions** – To minimize potential for conflicts between construction truck traffic traveling to and from the project building site, and nearby peak period commute traffic, to the extent feasible, the construction contractor shall limit construction truck trips to and from the project building site, as well as staging or unloading of equipment and materials, to between the hours of 9:00 a.m. and 4:00 p.m. The hours of construction truck restrictions would be determined by the SFMTA.

**Carpool, Bicycle, Walk and Transit Access for Construction Workers** – In addition to required elements of the Construction Management Plan, to minimize parking demand and vehicle trips associated with construction workers, the construction contractor shall include as part of the Construction Management Plan methods to encourage carpooling, bicycle, walk, and transit access to the project site by construction workers (such as providing transit subsidies to construction workers, providing secure bicycle parking spaces, participating in free-to-employee ride matching program from [www.511.org](http://www.511.org), participating in emergency rider home program through the City of San Francisco ([www.sferh.org](http://www.sferh.org)), and providing transit information to construction workers).

**Project Construction Updates for Adjacent Businesses and Residents** – In addition to required elements of the Construction Management Plan, to minimize construction impacts on access to nearby institutions, businesses and residents, the project sponsor, as part of the Construction Management Plan, shall provide nearby residences and adjacent businesses with regularly-updated information regarding project construction, including construction activities, peak construction vehicle activities (e.g., concrete pours), travel lane closures, parking lane and sidewalk closures. For example, a regular email notice could be distributed by the project sponsor that would provide current construction information of interest to neighbors, as well as contact information for specific construction inquiries or concerns. Similarly, a construction website could be created to provide such construction information.

### G. PUBLIC NOTICE AND COMMENT

On March 9, 2015, the Planning Department mailed a Notification of Project Receiving Environmental Review to owners of properties within 300 feet of the project site, adjacent occupants, and neighborhood groups. During the public review and comment period, the Planning Department received 59 comment letters from interested parties. The comment letters are available for review at the Planning Department offices in Case File No. 2014.0198E.

The Planning Department has considered the comments made by the public in preparation of this Preliminary Mitigated Negative Declaration. Comments are summarized below and references to where the comments are addressed in the Preliminary Mitigated Negative Declaration are provided.
Transportation and Circulation

A comment was received from the California Department of Transportation stating that the environmental review should include an analysis of the proposed project on state highway facilities in the project vicinity. Impacts related to state highway facilities (including on- and off-ramps and Interstate 80) are addressed in Section E.4, Transportation and Circulation, on pp. 68-71.

Another commenter expressed concern with traffic impacts during and following construction, including the proposed reconfiguration of Harriet Street and Ahern Way. Construction- and operation-related transportation and circulation impacts are discussed in Section E.4, Transportation and Circulation, on pp. 54-89.

Alternatives

A comment suggested that a modification of the San Francisco County Jail #5 - San Bruno Complex and No Project should be considered as alternatives to the proposed project. Per CEQA, an Initial Study or Preliminary Mitigated Negative Declaration only requires the analysis of the proposed project. However, if an Initial Study or Preliminary Mitigated Negative Declaration reveals that a proposed project would have significant adverse effects on the environment that cannot be mitigated, an Environmental Impact Report, along with a range of reasonable alternatives including an analysis of a No Project alternative, would be required. The project sponsor considered expanding facilities at the San Bruno Jail site, but rejected that option because of the requirement to transport inmates to and from courts and other facilities in San Francisco on a daily basis, among other reasons.

Comments Expressing Concern Over Transparency

A majority of the commenters were concerned that the preliminary technical background studies had not been made available to the public. The technical background studies have been available for review at the Planning Department as they were completed, and are included in the project file and available for review by the public. The technical background studies have also been attached to this Preliminary Mitigated Negative Declaration and appendices. Upon completion, the Preliminary Mitigated Negative Declaration and its appendices will be posted to the Planning Department’s website. The public will have the opportunity to review and comment on the Preliminary Mitigated Negative Declaration during the 20 day public review period. Any written comments received during that period will be considered by the Planning Department. Based on these comments, the Preliminary Mitigated Negative Declaration will be revised and City decision-makers will consider the Preliminary Mitigated Negative Declaration along with public comments and any necessary changes to the CEQA determination will be made at that time.
Comments Expressing the Need for an Environmental Impact Report

A majority of the comments focused on the need for a comprehensive analysis of the proposed project’s physical environmental impacts, and that the analysis should not be limited to traffic, air, and light. The commenters expressed a desire for a comprehensive Environmental Impact Report that addresses all environmental topics. The Preliminary Mitigated Negative Declaration has been prepared in accordance with CEQA and CEQA Guidelines. The Preliminary Mitigated Negative Declaration provides a project-specific analysis of the physical environmental impacts of construction and operation of the proposed project, and the proposed project’s contribution to cumulative impacts from reasonably foreseeable future projects in the project site vicinity and the City as a whole. The document provides a discussion of the proposed project’s potential impacts under all environmental topics in the City’s CEQA Checklist. As the PMND analysis did not find any significant unavoidable impacts as a result of the proposed project, it was determined that an EIR was not required per CEQA. The Preliminary Mitigated Negative Declaration has been posted to the Planning Department’s website, and the public will have the opportunity to review and comment on the Preliminary Mitigated Negative Declaration during the 20-day public review period. Those comments will be considered by decision-makers and any necessary changes to the Preliminary Mitigated Negative Declaration and/or the CEQA determination will be made.

Comments Expressing Concern with Social and Economic Benefits of a Replacement Jail

A commenter expressed concerns that the proposed rehabilitation and detention facility would not be the best use of urban land and/or city resources. The comments raise economic issues and do not raise any specific environmental issues that require discussion in the Preliminary Mitigated Negative Declaration. Such comments may be considered by the decision-makers as part of their decision to approve, modify, or disapprove the proposed project. This consideration is carried out independent of the environmental review process.

The commenter also questions whether the demolition of CJ#3 and CJ#4 would contribute to urban decay. The proposed project does not include demolition of any part of the HOJ. Even if the 6th and 7th floors of the west wing of the HOJ were to remain vacant for an extended period after inmates were relocated to the proposed RDF, the other floors of that wing would continue in use. No “urban decay” would be expected to result from maintaining two vacant floors of a multi-story civic building.
H. DETERMINATION

On the basis of this Initial Study:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☒ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a “potentially significant impact” or “potentially significant unless mitigated” impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, no further environmental documentation is required.

Dan Santizo, Facilities Maintenance
Manager and RDF Project Liaison
Dear President Breed and Board Members:

We would like to thank you for the great time and attention you have given to this matter of building a new jail to replace Hall of Justice Facilities.

San Francisco has always been at the forefront of innovative programming and this debate on jail construction presents yet another opportunity for San Francisco to illustrate leadership in an arena requiring innovation and a willingness to explore new ways of further reducing arrests and incarceration.

We agree that the two Hall of Justice jails, County Jail #3 and County Jail #4, should be closed in the interests of safety for both prisoners and for staff. However, we believe, from testimony we have heard over the last week, that alternatives to incarceration must be more fully explored. Given the national debate on mass incarceration, racial bias in criminal justice and the proven effectiveness of alternative programs put into place to reduce the jail population to current levels (the lowest it’s been since the 1980s), we believe that a decision to build a new jail facility is premature.

We urge the Board of Supervisors to call on city departments and local non-profits to further expand resources and services to those individuals caught up in the criminal justice system. As we heard again and again at committee hearings, “San Francisco can do better.”

Thank you.

Sincerely,

San Francisco Taxpayers for Public Safety
142 Wool Street
San Francisco, CA 94110
SECTION 1231 [BSCC]
LOCAL DETENTION

1231.1 Definitions.

BOARD OF STATE & COMMUNITY CORRECTIONS means the Board of State & Community Corrections, which acts by and through its executive officer, deputy directors and field representatives.

LIVING AREAS means those areas of a facility utilized for the day-to-day housing and activities of inmates. These areas do not include special-use cells such as sobering, safety and holding or staging cells normally located in receiving areas.

LOCAL DETENTION FACILITY is any city, county, city and county, or regional jail, camp, court holding facility or other correctional facility, whether publicly or privately operated, and court holding facility used for the confinement of adults or of both adults and minors, but does not include that portion of a facility for the confinement of both adults and minors which is devoted only to the confinement of minors. The types of local detention facilities are as follows:

Court holding facility means a local detention facility constructed within a court building after January 1, 1978, used for the confinement of persons solely for the purpose of a court appearance for a period not to exceed 12 hours.

Temporary holding facility means a local detention facility constructed after January 1, 1978, used for the confinement of persons for 24 hours or less pending release, transfer to another facility or appearance in court.
Type I facility means a local detention facility used for the detention of persons usually pending arraignment for not more than 96 hours, excluding holidays, after booking. Such a Type I facility may also detain persons on court order either for their own safe-keeping or sentenced to a city jail as an inmate worker, and may house inmate workers sentenced to the county jail provided such placement in the facility is made on a voluntary basis on the part of the inmate. As used in this section, an inmate worker is defined as a person assigned to perform designated tasks outside of his or her cell or dormitory, pursuant to the written policy of the facility, for a minimum of four hours each day on a five-day scheduled work week.

TYPE II FACILITY means a local detention facility used for the detention of persons pending arraignment, after arraignment, during trial and upon a sentence of commitment.

TYPE III FACILITY means a local detention facility used for the detention of persons usually pending arraignment for 40 hours each day on a five-day scheduled work week.

TYPE IV FACILITY means a local detention facility used for the detention of persons pending arraignment, after arraignment, during trial and upon a sentence of commitment.

RATED CAPACITY means the number of inmate occupants for which a facility's single- and double-occupancy cells or dormitories, except those dedicated for medical or disciplinary isolation housing, were planned and designed in conformity to the standards and requirements contained herein and in Title 15, C.C.R.

1231.2 Design criteria for required spaces.

1231.2.1 Reception and booking. Facilities where booking and housing occur shall have the following space and equipment:

1. Weapons locker as specified in Section 1231.3.12.
2. A cell or room for the confinement of inmates pending their booking, complying with Section 1231.2.2.
3. A sobering cell as described in Section 1231.2.4 if intoxicated, inmates who may pose a danger to themselves or others are held. For those facilities that accept male and female intoxicated inmates two sobering cells shall be provided.
4. Access to a shower within the secure portion of the facility.
5. Provide access to a secure vault or storage space for inmate valuables.
6. A safety cell or cells as described in Section 1231.2.5 if the program statement identifies the need for such a cell.
7. Telephones which are accessible to the inmates.
8. Unobstructed access to hot and cold running water for staff use.

1231.2.2 Temporary holding cell or room. A temporary holding cell or room shall:

1. Contain a minimum of 10 square feet (0.93 m²) of floor area per inmate;
2. Be limited to no more than 16 inmates;
3. Be no smaller than 40 square feet (3.7 m²) and have a clear ceiling height of 8 feet (2438 mm) or more;
4. Contain seating to accommodate all inmates as required in Section 1231.11;
5. Contain a toilet, wash basin and drinking fountain as specified in Section 1231.11;
6. Maximize visual supervision of inmates by staff; and
7. When located in a temporary holding facility, the cell or room shall be equipped with a bunk if inmates are to be held longer than 12 hours.

1231.2.3 Temporary staging cell or room. A temporary staging cell or room shall:

1. Be constructed for the purpose of holding inmates who have been classified and segregated in accordance with Sections 1050 and 1053 of Title 15, Division 1, California Code of Regulations.
2. Be limited to holding inmates up to four hours.
3. Be limited to no more than 80 inmates.
4. Contain a minimum of 10 square feet (0.93 m²) of floor area per inmate and a clear ceiling height of 8 feet (2438 mm) or more.
5. Be no smaller than 160 square feet (14.9 m²).
6. Contain seating to accommodate all inmates as required in Section 1231.3.
7. Contain toilet, wash basin and drinking fountain as specified in Section 1231.3.
8. Maximize visual supervision of inmates by staff.

1231.2.4 Sobering cell. A sobering cell shall:

1. Contain a minimum of 20 square feet (1.9 m²) of floor area per inmate;
2. Be limited to eight inmates;
3. Be no smaller than 60 square feet (5.6 m²) and have a clear ceiling height of 8 feet (2438 mm) or more;
4. Contain a toilet, wash basin and drinking fountain as specified in Section 1231.3;
5. Have padded partitions located next to toilet fixture in such a manner that they provide support to the user;
6. Maximize visual supervision of inmates by staff;
7. Be padded on the floor as specified in Section 1231.3; and,
8. Have accessible a shower in the secure portion of the facility.

- **x** - Required.  
- * - Required when program statement identifies need.  

1. Not required if community recreation facilities are available.  
2. Not required if the inmate population is less than 25.  
3. Not required if community access is available.  
4. Not required if meals are served in day room.  
5. Must be securely lockable and located within the security area.  
6. Required in areas housing prisoners of higher than minimum security.  
7. Not required if community access is permitted.

### 1231.2.5 Safety cell. A safety cell shall:

1. Contain a minimum of 48 square feet (4.5 m²) of floor area with no one floor dimension being less than 6 feet (1829 mm) and a clear ceiling height of 8 feet (2438 mm) or more;  
2. Be limited to one inmate;  
3. Contain a flushing ring toilet, capable of accepting solid waste, mounted flush with the floor, the controls for which must be located outside of the cell;  
4. Be padded as specified in Section 1231.3;  
5. Be equipped with a variable intensity, security-type lighting fixture which is inaccessible to the inmate occupant; control of which is located outside of the cell;  
6. Provide one or more vertical view panels not more than 4 inches (102 mm) wide nor less than 24 inches (610 mm) long which shall provide a view of the entire room;  
7. Provide a food pass with lockable shutter, no more than 4 inches (102 mm) high, and located between 26 inches (660 mm) and 32 inches (813 mm) as measured from the bottom of the food pass to the floor; and,  
8. Any wall or ceiling mounted devices must be inaccessible to the inmate occupant.
1231.2.6 Single-occupancy cells. Single-occupancy cells shall:

1. Have a maximum capacity of one inmate;
2. Contain a minimum of 60 square feet (5.6 m²) of floor area in Type I facilities and 70 square feet (6.5 m²) of floor area in Type II and Type III facilities;
3. Have a minimum clear ceiling height of 8 feet (2438 mm) and a minimum width of 6 feet (1829 mm);
4. Contain a toilet, wash basin and drinking fountain as specified in Section 1231.3; and
5. Contain a bunk, desk and seat as specified in Section 1231.3.

Exception: A Type I facility does not require a desk and seat.

1231.2.7 Double-occupancy cells. Double-occupancy cells shall:

1. Have a maximum capacity of two inmates;
2. Contain a minimum of 60 square feet (5.6 m²) of floor area in Type I facilities and 70 square feet (6.5 m²) of floor area in Type II and Type III facilities;
3. Have a minimum clear ceiling height of 8 feet (2438 mm) and a minimum width of 6 feet (1829 mm);
4. Contain a toilet, wash basin and drinking fountain as specified in Section 1231.3; and
5. Contain two bunks, and at least one desk and seat as specified in Section 1231.3.

Exception: A Type I facility does not require a desk and seat.

1231.2.8 Dormitories. Dormitories shall:

1. Contain a minimum of 50 square feet (4.7 m²) of floor area per inmate for a single-bed unit; a minimum of 70 square feet (7 m²) for a double-bed unit; and a minimum of 90 square feet (9.3 m²) for triple-bed unit and have a minimum ceiling height of 8 feet (2438 mm);
2. Be designed for no more than 64 inmates and no fewer than four inmates;
3. Provide access to water closets separate from the wash basin and drinking fountains as specified in Section 1231.3; and
4. In other than Type I facilities, provide storage space for personal items and clothing for each occupant.

1231.2.9 Dayrooms.

Dayrooms or dayroom space shall:

1. Contain 35 square feet (3.3 m²) of floor area per inmate in width in front of cells/rooms;
2. Contain tables and seating to accommodate the maximum number of inmates;
3. Provide access to water closets, wash basins and drinking fountains as specified in Section 1231.3;
4. Provide access to a shower or showers as specified in Section 1231.3; and
5. Be provided to all inmates in Type II and Type III facilities (except those housed in special-use cells) and to inmate workers in Type I facilities.

Dayroom space as described in this section may be a part of a single occupancy cell used for administrative segregation or a dormitory, in which case the floor area of the cell or a dormitory must be increased by the square footage required for the dayroom.

1231.2.10 Exercise area. An outdoor exercise area or areas must be provided in every Type II and Type III facility. The minimum clear height must be 15 feet (4572 mm) and the minimum number of square feet of surface area will be computed by multiplying 80 percent of maximum rated population by 50 square feet (4.7 m²) and dividing the result by the number of one-hour exercise periods per day.

The exercise area must contain or provide free access to a toilet, wash basin, and drinking fountain as provided in Section 1231.3.

There must be at least one exercise area of not less than 600 square feet (55.7 m²). The design shall facilitate security and supervision appropriate to the level of custody.

Type IV facilities shall have an outdoor recreation area or access to community recreation facilities.

1231.2.11 Correctional program/multipurpose space. An area for correctional programming must be provided in every Type II and Type III facility. The program area and furnishings shall be designed to meet the needs specified by the facility's program statement.

Type IV facilities shall have multipurpose space for games and activities, dining, visiting, TV meetings and quiet space for study and reading, such that activities do not conflict with each other.

1231.2.12 Medical examination room. There must be a minimum of one suitably equipped medical examination room in every facility which provides on-site health care. The examination room shall be designed in consultation with the responsible physician/health authority. Such a medical examination room shall:

1. Be located within the security area and provide for privacy of the inmates;
2. Provide not less than 100 square feet (9.3 m²) of floor space with no single dimension less than 7 feet (2134 mm);
3. Provide hot and cold running water;
4. Provide lockable storage for medical supplies; and
5. Any room where medical procedures are provided must be equipped with hot and cold running water.

1231.2.13 Pharmaceutical storage space. Provide lockable storage space for medical supplies and pharmaceutical preparations as referenced by Title 15, California Code of Regulations, Section 1216.

1231.2.14 Medical care housing. There shall be some means to provide medical care and housing of ill and/or infirm inmates. When the program statement for a Type II
or Type III facility indicates that medical care housing is needed, such housing must provide lockable storage space for medical instruments and must be located within the security area of the facility accessible to both female and male inmates, but not in the living area of either. The medical care housing unit shall be designed in consultation with the health authority. Medical/mental health areas may contain other than single occupancy cells.

If negative pressure isolation rooms are being planned, they shall be designed to recognized industry standards.

1231.2.15 Reserved.

1231.2.16 Commissary. In all Type II, III and IV facilities, except where community access is available, there shall be provisions made for inmates to purchase items (such as candy, toilet articles, stationery supplies, books, newspapers and magazines, etc.). An area shall be provided for the secure storage of the stock for such inmate canteen.

1231.2.17 Dining facilities. In all Type II, III and IV facilities which serve meals, dining areas shall be provided which will allow groups of inmates to dine together. Such dining areas shall not contain toilets, wash basins or showers in the same room without appropriate visual barrier. Wherever the facility contains a central dining room or rooms, it shall contain a minimum of 15 square feet (1.4 m²) of floor space and sufficient tables and seating for each inmate being fed.

1231.2.18 Visiting space. Space shall be provided in all Types I, II, III and IV facilities for visiting.

1231.2.19 Safety equipment storage. A secure area shall be provided for the storage of safety equipment such as fire extinguishers, self-contained breathing apparatus, wire and barcutters, emergency lights, etc.

1231.2.20 Janitors’ closet. In Type II facilities, at least one securely lockable janitors’ closet with sufficient area for the storage of cleaning implements and supplies must be provided within the security area of the facility. A mop sink shall also be available within the security area of the facility. In court holding, temporary holding, Types I, III and IV facilities, the closet need not be in the security area.

1231.2.21 Storage rooms. One or more storage rooms shall be provided to accommodate a minimum of 80 cubic feet (2.3 m³) of storage area per inmate for inmate clothing and personal property, institutional clothing, bedding and supplies. Court holding, temporary holding and Type I facilities may be excluded from the storage space requirement for personal and institutional clothing unless clothing is issued.

1231.2.22 Audio monitoring system. In court holding, temporary holding, Type I, Type II and Type II facilities, there shall be an inmate- or sound-actuated audio monitoring system in temporary holding cells or rooms; temporary staging cells or rooms, sobering cells, safety cells, single and double occupancy cells, dormitories, dayrooms, exercise areas and correctional programs/multipurpose space, which is capable of alerting personnel who can respond immediately.

1231.2.23 Laundry facilities. In Type IV facilities, provision shall be made for washing and drying personal clothing by machines, either in the facility or in the community, if access is permitted for same.

1231.2.24 Emergency power. There shall be a source of emergency power in all detention facilities capable of providing minimal lighting in all housing units, activities areas, corridors, stairs and central control points, and to maintain fire and life safety, security, communications and alarm systems. Such an emergency power source shall conform to the requirements specified in Title 24, Part 3, Article 700, California Electrical Code, California Code of Regulations.

1231.2.25 Confidential interview rooms. There must be a minimum of one suitably furnished interview room for confidential interviews in every facility which provides on-site health care. The interview room shall be designed in consultation with responsible custodial staff and health care. Such an interview room shall:

1. Be located within the security area accessible to both female and male inmates; and
2. Provide not less than 70 square feet (6.5 m²) of floor space with no single dimension less than 6 feet (1829 mm).

1231.2.26 Attorney interview space. All facilities except Type IV facilities shall include attorney interview areas which provide for confidential consultation with inmates.

Exception: The design of court holding and temporary holding facilities shall include the following required spaces from Sections 1231.2.2, 1231.2.19, 1231.2.20, 1231.2.21, 1231.2.22, 1231.2.24 and 1231.2.26.

1231.3 Design criteria for furnishings and equipment. Furnishings and equipment shall be as follows:

1231.3.1 Toilets/urinals.
1. Toilets/urinals must be provided in single-occupancy cells and double-occupancy cells.
2. In dormitories, toilets/urinals must be provided in a ratio to inmates of 1:10.
3. Toilets/urinals must be accessible to the occupants of day-rooms and exercise areas.
4. In temporary holding cells and temporary staging cells toilets/urinals must be provided in a ratio to inmates of 1:16.
5. In sobering cells toilets/urinals must be provided in a ratio to inmates of 1:8.
6. One urinal or 2 feet (610 mm) of urinal trough may be substituted for each toilet up to one third of the total number of toilets required, except in those facilities or portions thereof used for females.

Note: Toilet areas shall provide modesty for inmates with staff being able to visually supervise.
1231.3.2 Wash basins.

1. Wash basins must be provided in single occupancy cells and double occupancy cells.

2. In dormitories, wash basins must be provided in a ratio to inmates of 1:10.

3. Wash basins must be accessible to the occupants of day-rooms and exercise areas.

4. In temporary holding cells and temporary staging cells, wash basins must be provided in a ratio to inmates of 1:16.

5. In sobering cells, wash basins must be provided in a ratio to inmates of 1:8.

6. Wash basins must be provided with hot and cold or tempered water.

7. Two feet (610 mm) of wash basin trough may be substituted for each basin required.

1231.3.3 Drinking fountains. There must be a minimum of one drinking fountain in every single-occupancy cell, double-occupancy cell, dormitory, temporary holding cell, temporary staging cell, sobering cell, and be accessible to the occupants of day rooms and exercise areas. Additional drinking fountains shall be located in other areas of the facility so that drinking water will be available to inmates and staff. Such drinking fountains must meet the following minimum health requirements:

1. The drinking fountain bubbler shall be on an angle which prevents waste water from flowing over the drinking fountain bubbler.

2. Water flow shall be actuated by mechanical means.

1231.3.4 Showers must be available to all inmates on a ratio of at least one shower to every 20 inmates or fraction thereof and must provide hot and cold water or tempered water. Shower stalls/shower areas must be designed and constructed of materials which are impervious to water and soap so they may be easily cleaned.

Note. Shower areas shall provide modesty for inmates with staff being able to visually supervise.

1231.3.5 Beds must be elevated off the floor, have a solid bottom, and a sleeping surface of at least 30 inches (762 mm) wide and 76 inches (1930 mm) long. Multiple beds must have a minimum of 21 inches (533 mm) between bed pans. Except in minimum security areas, beds must be securely fastened to the floor or the wall.

1231.3.6 Lighting. Lighting in housing units, dayrooms and activity areas must be sufficient to permit easy reading by a person with normal vision, and shall not be less than 20 footcandles (215.2 lux) at desk level and in the grooming area. Lighting shall be centrally controlled and/or occupant controlled in housing cells or rooms. Night lighting in these areas shall be sufficient to give good visibility for purposes of supervision. In minimum-security areas, lighting may be supplied by ordinary lighting fixtures, and in areas of higher security, light fixtures must be of secure design.

1231.3.7 Windows. In housing areas of higher than minimum security, exterior windows which are constantly accessible to inmates for escape must be designed and constructed so that if broken out, the net area accessible for escape is no greater than 5 inches (127 mm) in one dimension.

1231.3.8 Cell padding. In sobering cells, the floor and partition shall be padded. In safety cells, padding must cover the entire floor, doors, and walls and everything on them to a clear height of 8 feet (2438 mm).

All such padded cells must be equipped with a tamper-resistant fire sprinkler as approved by the State Fire Marshal. All padding must be:

1. Approved for use by the State Fire Marshal;

2. Nonporous to facilitate cleaning;

3. At least 1/2-inch (12.7 mm) thick;

4. Of a unitary or laminated construction to prevent its destruction by teeth, hand tearing or small metal objects;

5. Firmly bonded to all padded surfaces to prevent tearing or ripping;

6. Without any exposed seams susceptible to tearing or ripping.

1231.3.9 Mirrors. A mirror of a material appropriate to the level of security must be provided near each wash basin specified in these regulations.

1231.3.10 Seating. In temporary holding and temporary staging cells, seating must be securely fixed to the floor and/or wall. When bench seating is used, 18 inches (457 mm) of bench is seating for one person.

1231.3.11 Table/seat. In single- and double-occupancy cells, a table and seat for the purpose of writing and dining shall be provided.

Exception: A Type 1 facility does not require a table and a seat.

1231.3.12 Weapons locker. A secure weapons locker shall be located outside the security perimeter of the facility. Such weapons lockers shall be equipped with individual compartments, each with an individual locking device. Weapons lockers are required in temporary and court holding facilities and in all facilities of higher than minimum security.

Exception: The design of court holding and temporary holding facilities shall include the design criteria for furnishings and equipment from Sections 1231.3.1, 1231.3.2, 1231.3.3, 1231.3.6, 1231.3.10 and 1231.3.12.

1231.4 Enclosure of vertical openings. Elevator shafts, vent shafts and other vertical openings shall be enclosed, and the enclosure shall be as set forth in Chapter 7.

1231.5 Fire-extinguishing systems. Automatic fire-extinguishing systems, standpipes and basement pipe inlets shall be installed when and as required by Chapter 9.

1231.6 Existing Group I occupancies. Existing buildings housing existing protective social care homes or facilities
established prior to the effective date of these regulations may have their use continued if they conform, or are made to conform, to the following provisions.

1231.6.1 Use of floors. The use of floor levels in buildings of Type III, IV or V nonfire-rated construction may be as follows:

Nonambulatory—first floor only;

Ambulatory—not higher than the third-floor level, provided walls and partitions are constructed of materials equal in fire-resistive quality to that of wood lath and plaster in good repair and all walls are firestopped at each floor level.

1231.6.2 Enclosure of exits and vertical openings. Except for two-story structures housing ambulatory guests, all interior stairs shall be enclosed in accordance with Chapter 10. In lieu of stairway enclosures, floor separations or smoke barriers may be provided in such a manner that fire and smoke will not spread rapidly to floors above or otherwise impair exit facilities. In these instances, floor separations or smoke barriers shall have a fire resistance equal to not less than 1 1/2-inch (12.7 mm) gypsum wall board on each side of wood studs with openings protected by not less than a 1 1/4-inch (44 mm) solid bonded wood-core door of the self-closing type. All other vertical openings shall be enclosed in accordance with the provisions of Chapter 7.

1231.6.3 Exit access. Each floor or portion thereof of building used for the housing of existing protective social-care homes or facilities shall have access to not less than two exits in such a manner as to furnish egress from the building or structure in the event of an emergency substantially equivalent to the provisions of Chapter 10.

1231.6.4 Corridor openings. Openings from rooms to interior corridors shall be protected by not less than 13/4-inch (44 mm) solid-bonded wood-core doors. Transoms and other similar openings shall be sealed with materials equivalent to existing corridor wall construction.

1231.6.5 Interior wall and ceiling finishes shall conform to the requirements for a Group R, Division 1 occupancy as specified in Chapter 8.

1231.6.6 Automatic sprinkler systems shall be installed in existing protective social-care occupancies in accordance with the provisions of Chapter 9.

1231.6.7 Fire alarm systems. Automatic fire alarm systems shall be installed in existing protective social-care homes or facilities in accordance with the provisions of Chapter 9.

Exception: When an approved automatic sprinkler system conforming to Chapter 9 is installed, a separate fire alarm system as specified in this subsection need not be provided.

PUBLISHED ON MAY 13, 2015

BACKGROUND

An environmental evaluation application (2014.0198E) for the proposed project at 850 Bryant Street was filed on June 18, 2014.

A Preliminary Mitigated Negative Declaration (PMND) was published on May 13, 2015. The Notice of Availability stated that the review period for public comment or appeal would be 20 days, ending on June 3, 2015 ("i.e., by 5:00 p.m. on June 3, 2015"). On June 3, 2015, Californians United for a Responsible Budget filed a letter appealing the PMND. Additional comments were received from: Lisa Marie Alatorre (plus 173 individuals and groups who submitted an identical letter); Leo Warshaw-Cardoza; Jenna Gaarde; Sami Kilmitto; Johannes Kuzmich; Michael Lyon; Dylan Moore; Andrea Salinas; Eli; Sr Edmond, Luicje Lany; Larry; Bilal Du; Joss Greene, and an unsigned letter.

The concerns in the appeal letter, presented below by environmental topic, are summarized and responded to, and concerns raised in comment letters received are listed following the appeal letter topics and addressed in a master response. Copies of the appeal letter and the comment letters are included within this appeal packet.

COMPATIBILITY WITH EXISTING ZONING AND PLANS

ZONING AND PLANS CONCERN 1: The appellant asserts that the PMND [proposed project] fails to comply with the City and County of San Francisco's Priority Policies #2, #3, and #5 and so should be rejected.

"2. Project fails to comply with San Francisco Proposition M"

"As noted in the PMND, "Prior to issuing a permit for any project which requires an Initial Study under CEQA, prior to issuing a permit for any demolition, conversion, or change of use, and prior to taking any action which requires a finding of consistency with the General Plan, the City is required to find that the proposed project or legislation would be consistent with the Priority Policies." (PMND, p. 28) Priority Policy #2 is "2) conservation and protection of existing housing and neighborhood character to preserve the cultural and economic diversity of neighborhoods;" #3 is "preservation and enhancement of affordable housing;" and #5 is "5) protection of industrial and service land uses from commercial office development and enhancement of resident
employment and business ownership." (PM ND, p. 27) However, the project includes potential displacement of 14 units of existing affordable "SRO" housing: "If relocation of the building tenants is determined necessary, it is likely that the building could accommodate future commercial/office uses." (PM ND, p. 8) The potential "residential relocation plan" to be drafted by a different City department is not part of the PM ND and may face significant hurdles. As is well known, the current supply of affordable rental housing in San Francisco is in a total state of crisis due to rising rents and the widespread use of eviction against low-income tenants. Waiting lists for public and affordable housing are years-long. San Francisco Housing Authority recognizes that "The demand for low-income housing in San Francisco far exceeds available units." (http://www.sfha.org/Residents-Applicants.html) SFHA advises low-income tenants, in many cases, you may have to wait 4 to 9 years before your name will reach the top of the List." (http://www.sfha.org/FAQ-s.html) And at present, the waitlist for Section 8 housing is currently closed, and only 3 units were listed on their availability page within the past two years. (http://sfha.org/Information--Section-8.html, http://sfha.gosection8.com/SearchRentals.aspx)

"In the current affordable housing crisis it is unrealistic in the extreme to assume that the Real Estate Division of the San Francisco General Services Agency has the funding or ability to acquire - even on a temporary basis - 14 units of affordable housing if the Housing Authority, which has the specific charge to find such units and lease them through Section 8 - cannot even accomplish this. Loss of the units violates Priority Policy #2 and #3; insofar as the area around this building is zoned SALI (Service/Arts/Light Industrial), conversion of the SRO into commercial/office uses would further violate Priority Policy #5 by encroaching such uses into an industrial and service land-use area.

"The PM ND fails to comply with the City and County of San Francisco's Priority Policies #2, #3, and #5 and so should be rejected." (Californians United for a Responsible Budget)

RESPONSE TO ZONING AND PLANS CONCERN 1: Under CEQA, land use impacts are considered to be significant if the proposed project would conflict with any plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect. Environmental plans and policies are those, like the Bay Area Air Quality Management District (BAAQMD) 2010 Clean Air Plan, which directly address environmental issues and/or contain targets or standards, which must be met in order to preserve or improve characteristics of the City's physical environment. The proposed project would not obviously or substantially conflict with applicable plans, policies, and regulations such that an adverse physical change would result. Therefore, the proposed project would have a less-than-significant impact with regard to conflicts with existing plans and zoning.

Issues related to the cost of housing are socioeconomic rather than physical and are relevant to CEQA only inasmuch as they are connected to physical environmental impacts. Under CEQA, a project may have a significant impact if it will displace substantial numbers of people,
necessitating the construction of replacement housing elsewhere. The potential displacement of 14 SRO residential units would not displace substantial numbers of people, and the PMND found this impact less than significant.

As described on p. 4 of the PMND, “the project site includes a three-story, 7,150-gsf, 14-unit single room occupancy (SRO) residential building with ground-floor retail, constructed in 1916 (480-484 Sixth Street).” As stated on p. 8, this “14-unit SRO residential building with ground-floor retail would remain on the project building site, although it may be decided through the process of DPW’s future acquisition of the property to relocate some or all of the building occupants before the proposed RDF is ready for use. If relocation of the building tenants is determined necessary, it is likely that the building could accommodate future commercial/office uses. In accordance with the California Relocation Act (Chapter 16, Section 7260 et seq. of the Government Code), the proposed project includes provision for a residential relocation plan, which, if needed, would be prepared by the Real Estate Division of the San Francisco General Services Agency. The relocation plan would establish a program to help affected residential tenants who qualify for assistance with relocation expenses, including moving expenses, and social services.”

The PMND further states on p. 37, that “although housing demand at all income levels has outpaced housing production in the City, the residential displacement of 14 SRO housing units would not be substantial enough to necessitate the construction of replacement housing.” Therefore, the proposed project would not create the need for additional housing to be constructed elsewhere and this impact was found to be less than significant in the PMND. Furthermore, in accordance with the relocation plan, a program would be established as part of the project to help affected residential tenants who qualify for assistance with relocation expenses, including moving expenses, and social services.

The City has not determined whether relocation of the 480-484 Sixth Street building occupants (residents and retail tenants) would be necessary. There are no known redevelopment plans for the building, and it is possible that relocation of the building occupants would not even occur as part of the proposed project. In the absence of certainty as to what may occur on the site, a likely future use on the site was established to adequately analyze the potential environmental impacts that could occur, if relocation of the building tenants were determined to be necessary. Thus, for purposes of environmental analysis in the PMND, specifically the analysis of environmental impacts where relocation of these occupants needed to be quantified, a “worst-case scenario” was assumed—that all 14 units would be vacated and more intense uses were

---

1 These topics include population and housing, transportation and circulation, noise, and air quality. Analysis of the other topics in the Initial Study are not dependent on whether the existing residential uses would be retained on the project site or whether it would be converted to office use to be used by the Sheriff’s Department or other public agencies.
analyzed. As further stated on PMND p. 64, under this worst-case scenario “the existing residential and restaurant uses within the building would be relocated, and upon completion of the proposed project, the building would contain about 4,770 gsf of office uses and 2,380 gsf of ground floor retail uses.” Analyses of other topics in the Initial Study would be the same whether the existing building to be retained on the project site remained in residential use or was converted to office for use by the Sheriff’s Department or other public agencies.

Contrary to the appellant’s assertion, the potential loss of the SRO units under the proposed project would be consistent with established policies in Proposition M, the Accountable Planning Initiative, including Policy (2) conservation and protection of existing housing and neighborhood character to preserve the cultural and economic diversity of neighborhoods, and Policy (3) preservation and enhancement of affordable housing. Even though the potential residential displacement of 14 SRO housing units would not be substantial enough to necessitate the construction of replacement affordable housing, the proposed project would provide protection to the affected tenants through implementation of a residential relocation plan that would establish a program to help affected residential tenants who qualify for assistance with relocation expenses, including moving expenses and social services. If other uses were to be made of the existing building, the loss of 14 SRO housing units would not result in a substantial increase in housing demand in San Francisco, thus resulting in a less-than-significant environmental impact.

The appellant also states that the potential loss of the SRO units is inconsistent with Proposition M Policy (5) protection of industrial and service land uses from commercial office development and enhancement of resident employment and business ownership. However, there are no existing industrial or service uses on the project site that could be displaced as result of the proposed project.

Effects analyzed under CEQA must be related to a physical change in the environment. The appellant does not state how this would result in an adverse physical change in the environment.

As part of the entitlement process for the proposed project, the Planning Commission and the Board of Supervisors will evaluate the proposed project against these Priority Planning Policies, and will consider whether the proposed project would, on balance, conform or conflict with the Priority Planning Policies. This review is carried out independent of the environmental review process, as part of the decision to approve, modify, or disapprove a proposed project. Because the PMND analyzes the impacts related to those policies, the PMND will provide decision-makers with information that will assist them in determining the proposed project’s consistency with these policies.
TRANSPORTATION AND CIRCULATION (PARKING)

TRANSPORTATION AND CIRCULATION CONCERN 1: The appellant asserts that the proposed project is not an "employment center" and is not eligible for exclusion from an analysis of aesthetic or parking impacts through the City’s Transit-Oriented Infill Eligibility Checklist project. As a result, the appellant asserts that the transportation impact analysis in the Preliminary Mitigated Negative Declaration is not adequate and should be rejected because it did not consider the effect of a constrained parking supply on traffic impacts at the intersections considered in the PMND.

3. Parking impacts are not mitigated, but the project is not an employment center project

The PMND claims that ‘aesthetics and parking are no longer to be considered in determining if a project has the potential to result in significant environmental effects’ per Public Resources Code Section 21099(d), effective January 1, 2014 (‘aesthetics and parking impacts of a residential, mixed-use residential, or employment center project on an infill site located within a transit priority area shall not be considered significant impacts on the environment’) because the proposal is an ‘employment center project’ (PMND, p. 31, 79). However, Public Resources Code Section 21099(l)(a) clearly states ‘Employment center project’ means a project located on property zoned for commercial uses with a floor area ratio of no less than 0.75 and that is located within a transit priority area.’ The PMND states multiple times that the zoning from the project site is currently SALI (Service/ Arts/Light Industrial) and is proposed to be changed to P (Public Use) (PMND p.2, 5, etc.) The project is not an ‘employment center project’ because it is not on a parcel zoned for commercial uses - it is proposed to be zoned for public non-commercial uses. Thus parking impacts must be considered potentially significant unmitigated environmental impacts.

The PMND’s ‘informational’ parking analysis indicates that the project will result in the removal of 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. In addition, the project is projected to create a net increase of 47 new FTE employees (PMND, p. 36) creating a net new parking demand of 10 spaces for the Jail ("RDF") portion, plus 26 more for the proposed reuse of 480-484 Sixth St. The PMND notes that “during field surveys on-street parking spaces on Harriet Street, Ahem Way, and Sixth Street were at or close to 100 percent occupied throughout the day," and that ‘visitors or others that utilize the on-street parking on Harriet Street, Ahem Way, and Sixth Street would need to be accommodated elsewhere in the project vicinity, either on street or in other off-street facilities.’ (PMND, p. 80.) The PMND concludes that ‘the net new project parking demand, and the demand associated with the parking spaces that would be eliminated, would need to be accommodated on-street or within nearby off-street facilities, and area-wide parking occupancy would increase further’ - but the project includes no such accommodation. While the PMND speculates that ‘under cumulative conditions, as under existing conditions, due to the difficulty in finding on-
street parking in the study area, some drivers may park outside of the study area, switch to transit, car-sharing, carpooling, walking, or bicycling.' (PM ND, p. 89) However, the project includes no significant transit, car-sharing, carpooling, walking, or bicycling improvements, exacerbating the potentially significant unmitigated environmental impacts created by the parking impacts.

In fact, the PM ND even recognizes that 'considering cumulative parking conditions, over time, due to the land use development and increased density anticipated within the City, parking demand and competition for on- and off-street parking is likely to increase.' (PM ND, p. 88) It also recognizes – but fails to study – ‘secondary physical impacts associated with constrained supply (e.g., queuing by drivers waiting for scarce on-site parking spaces that affects the public right-of-way)’ and circling by rivers looking for parking spaces. (PM ND, p. 79) The traffic analysis indicates that 4 of the 5 studied intersections already experience a Level of Service score of C or worse (1 is an F) at peak times (PM ND, p. 59). Adding more vehicles to these congested conditions will aggravate traffic conditions and create more local air pollution and other potentially significant unmitigated environmental impacts.

In summary, the increased parking demand on both on-street and off-street parking spaces is clearly an unmitigated environmental impact. The unmitigated parking impacts could give rise to further unmitigated impacts on traffic and air quality. If for no other reason, the PM ND should be rejected.”

RESPONSE TO TRANSPORTATION AND CIRCULATION CONCERN 1: The project site is an infill site located within a transit-rich area with easy and frequent access to transit provided by the San Francisco Municipal Transportation Agency (Muni) and regional transit service providers; thus, the project meets two of the three criteria in the City’s Transit-Oriented Infill Eligibility Checklist. The proposed public facility (a Rehabilitation and Detention Facility that would be operated by the City and County of San Francisco Sheriff’s Department) would be a principally permitted use in a Public Use Zoning District (P Zoning District). The City’s Transit-Oriented Infill Eligibility Checklist was prepared with the understanding that the project sponsor would seek a change to the zoning classification on the project building site because the present zoning (Service/Arts/Light Industrial Zoning District (SALI Zoning District) would not allow the proposed use.

The appellant correctly identified one of the required approvals of the proposed project, i.e., the rezoning of the eastern portion of the project site from a SALI Zoning District to a P Zoning District (see PM ND pp. 20-21). As discussed in the land use analysis under Impact LU-2 (PM ND p. 33), the proposed project would comply with the provisions of Planning Code
Section 211, which regulates uses in P Zoning Districts, institutional uses are principally permitted in P Zoning Districts (e.g., the Hall of Justice and County Jail Facilities No. 1 and No. 2 on the parcel immediately to the west of the project building site, which is in a P Zoning District). The proposed project would exhibit the same range of uses as currently exist in the adjacent P Zoning District. The San Francisco Planning Department considers these uses as employment centers in their determination regarding compliance with Senate Bill 743/Public Resources Code Section 21099. Thus, with respect to the exclusion of analyses of aesthetics and parking, the City’s Transit-Oriented Infill Eligibility Checklist has been properly prepared because the proposed project meets each of the three criteria. The appellant’s assertion is not founded in facts and no further responses are required.

With respect to parking, the Planning Department stated in its response to SB 743 that the City determined years ago that parking loss or deficit in and of itself does not result in direct changes to the physical environment, and that determination has been upheld (see San Franciscans Upholding the Downtown Plan v. City and County of San Francisco (2002) 102 Cal.App.4th 656). While the environmental analysis does assess the indirect or secondary environmental effects of parking loss, such as air quality or noise impacts, the direct effects of a parking deficit or loss have been determined to be a significant impact under CEQA in only the rarest of circumstances. It is important to note that San Francisco has not been alone in recognizing that the adequacy of parking is more appropriately assessed as part of reviewing project merits rather than a potentially significant environmental impact under CEQA. In 2010, the Governor’s Office of Planning and Research (OPR) amended Appendix G of the CEQA Guidelines to remove the significance criterion about inadequate parking capacity. This policy direction continues to evolve and is strengthened by the provisions of SB 743. In addition to addressing Level of Service reform, Section 5 of SB 743 states that, “...the adequacy of parking for a project shall not support a finding of significance...” It is the San Francisco Planning Department’s interpretation, in consultation with the City Attorney, that this provision of the statute expands upon the parking changes related to the 2010 amendment to the CEQA Appendix G transportation significance standards in that it would apply to all projects in transit priority areas, not just residential, mixed-use residential or employment center projects.

2 On March 22, 2015, the redesignation of Planning Code Section 234 as Planning Code Section 211 became effective as part of Ordinance No. 22-15 reorganizing Article 2 (adopted by the Board of Supervisors on February 20, 2015). If the PMND is upheld, the Final Mitigated Negative Declaration will include this correction.

As explained on PMND pp. 79-80, the San Francisco Planning Department and CEQA do not consider parking supply as part of the permanent physical environment and, therefore, do not consider changes in parking conditions to be environmental impacts as defined by CEQA. The San Francisco Planning Department acknowledges, however, that parking conditions may lead to secondary environmental impacts and may be of interest to the public and the decision-makers. Existing parking regulations and occupancy data are provided on PMND pp. 63-64, project-related parking information is discussed on PMND pp. 79-80, and cumulative parking information is discussed on PMND pp. 79-80. Because the new RDF is merely replacing the existing County Jails No. 3 (CJ#3) and No. 4 (CJ#4) which are presently located on the 6th and 7th floors of the existing HOJ, with fewer beds, implementation of the proposed project would result in an overall reduction in traffic (47 fewer inbound and outbound p.m. peak hour vehicle trips). This would result in a decrease in the associated parking demand (see PMND p. 80). Therefore, the appellant’s assertion that the project-level and cumulative transportation impact analysis in the PMND is not adequate, did not factor cars searching for parking into the traffic impact analysis, or identify parking impacts as potentially significant is not correct. It is premised on the assumption that the proposed project would add vehicle trips to the adjacent roadways (where, in fact, there would be a traffic reduction because the project would relocate an existing use from the 6th and 7th floors of the Hall of Justice to the project building site) and a misunderstanding of the City’s standard approach to parking analysis.

The appellant also suggests that the proposed project does not do enough to encourage alternative modes of travel to and from the project site as a means to alleviate the perceived effects of constrained parking. Please see Improvement Measure I-TR-1: Transportation Demand Management (TDM) Plan, PMND pp. 70-71, for details about additional measures aimed at supporting the use of transit and other modes of travel.

NOISE

NOISE CONCERN 1: The appellant asserts that the noise analysis in the Preliminary Mitigated Negative Declaration was not adequate and should be rejected because it did not consider the effect of ambient noise levels on future inmates who would use the partially enclosed outdoor yards of the proposed Rehabilitation and Detention Facility, including potential amplification of existing noise levels due to the design of the partial enclosure and its location in relation to the elevated freeway.

"1. Air quality and noise impacts on building occupants' outdoor space are not assessed and are potentially significant

...
In addition, the noise levels for the outdoor yards are unacceptable. Although they have not been assessed within the PMND (which is its an error with the PMND), they can be expected to be at least as loud as current outdoor measurements at a similar elevation in the vicinity. (Elevation is an important factor to accurately reflect the distribution of freeway noise that is louder above and lower below the roadway guardrail height.) In fact, the partial enclosure of the proposed outdoor yards would likely reflect sound to increase noise levels. The PMND notes that "background noise levels (at or above the freeway elevation) were found to be 79 dBA (Ldn) near the northern façade (closest to the freeway) and 75 dBA (Ldn) near the southern façade (midblock)." (PMND, p. 106-107) The most relevant categories from San Francisco’s Land Use Compatibility Chart for Community Noises are "Outdoor Spectator Sports," which "should not be undertaken" in areas where outdoor noise is above levels of 73 dBA, and Playgrounds, which "should not be undertaken" in areas where outdoor noise is above 75 dBA. (PMND, p. 97) Freeway noise levels are projected to increase by as much as 2.4 dBA in the future (PMND, p. 110). Noise is already recognized to be an additional source of stress within the jail environment, and outdoor spaces are generally one of a very few opportunities people in jails have to experience a less stressful environment. (Richard Wener, "The Environmental Psychology of Prisons and Jails," Ch. 9. "The Effects of Noise in Correctional Settings": Cambridge University Press, 2012.) The proposed site is fundamentally incompatible with acceptable outdoor recreation, but the PMND has not studied, let alone mitigated, these conditions for the project. (Californians United for a Responsible Budget)

RESPONSE TO NOISE CONCERN 1: Exercise space for inmates (see PMND p. 13) would be provided on the second through fifth floors of the proposed Rehabilitation and Detention Facility and is clearly defined in the PMND as an interior space. These spaces are labeled as "YARD" spaces on Figure 9: Proposed Second Floor Plan, Figure 10: Proposed Third Floor Plan, and Figure 11: Proposed Fourth and Fifth Floor Plans provided in the Project Description (see PMND pp. 15-17). Each of the "YARD" spaces labeled on those floor plans would be fully enclosed exercise rooms with light wells that reach down into theses spaces from the rooftop. The light wells are depicted by the single isosceles triangle on the "YARD" spaces on the west portion of the second through fifth floor plans (see Figures 9, 10 and 11) and the two obtuse triangles on the "YARD" spaces on the east portion of the fourth and fifth floors (see Figure 11). The design of the proposed Rehabilitation and Detention Facility is governed by adult detention facility codes and standards for maximum security facilities (see PMND p. 7), and all spaces including the exercise spaces and light wells/skylights that penetrate the building floor plates would be enclosed. As explained in the Project Description on PMND p. 13, the second, third, fourth, and fifth floors would have “room for interior exercise and class room space.” Therefore, future inmates who use the proposed exercise spaces would not be affected by ambient noise levels in excess of 75 dBA. Further, as stated on PMND pp. 107-108, the proposed Rehabilitation and Detention Facility would include a fixed window system and dual wall designs (similar to those of County Jail Facilities No. 1 and No. 2 located to the west of the...
project site), and incorporate noise attenuation measures to address noise produced by the ventilation system to achieve acceptable interior noise levels (Mitigation Measure M-NO-3 on PMND p. 108). Thus, the appellant’s concern related to potential noise impacts on future inmates of the proposed Rehabilitation and Detention Facility while exercising in outdoor yards and the adequacy of the noise analysis conducted for the PMND is not founded in fact because it is premised on a misunderstanding of the graphics provided with the PMND. No further response is required.

AIR QUALITY

AIR QUALITY CONCERN 1: The appellant asserts that the air quality analysis in the Preliminary Mitigated Negative Declaration was not adequate and should be rejected because it did not consider the exposure of future inmates to poor air quality at the partially enclosed outdoor yards of the proposed Rehabilitation and Detention Facility, which is located within an Air Pollutant Exposure Zone.

“1. Air quality and noise impacts on building occupants’ outdoor space are not assessed and are potentially significant

“The PMND recognizes that people being held in jail are “sensitive receptors” and that podular housing units are a sensitive land use for the purposes of CEQA air quality assessment, (PMND, p. 123-124, 128) and that the project is located in an Air Pollutant Exposure Zone. (PMNd, p. 128) The PMND asserts that an Enhanced Ventilation Proposal approved by the Department of Public Health will be sufficient to mitigate the exposure of sensitive receptors to increased pollutant exposure. However, unlike other residential occupancies, people in jail are restrained not only in the indoor air quality they are exposed to but in their access to healthy outdoor air. In particular, the proposed building designs indicate that people in jail will be required to exercise and have outdoor recreation in yards that face Highway 101 to the west (PMND, p. 15-17). The proposed Enhanced Ventilation Proposal does not mitigate exposure to the dangerous air quality inherent in the proposed project site’s outdoor areas. In fact, the building design of stacked, semienclosed yards facing into the prevailing winds coming across the freeway may well exacerbate already unacceptable outdoor air quality in the area. The potentially significant health impacts of having restricted outdoor spaces in an Air Pollutant Exposure Zone with designs that may concentrate pollutant levels have not even been studied in the PMND, let alone mitigated.” (Californians United for a Responsible Budget)

RESPONSE TO AIR QUALITY CONCERN 1: As indicated above in the Response to Noise Concern 1, the proposed Rehabilitation and Detention Facility would not include outdoor spaces. The exercise space on each floor would be enclosed. The appellant may have misunderstood the graphics provided in the Project Description. The City’s mapping of Air Pollutant Exposure Zones and its approach to the analysis of air quality impacts, which was
developed in coordination with the San Francisco Department of Public Health and in response to the Bay Area Air Quality Management District's 2012 update to its CEQA Guidelines, has evolved over the last five years. Enhanced ventilation, previously imposed as a mitigation measure, is now required for all projects within Air Pollutant Exposure Zones (San Francisco Health Code Article 38). Thus, the proposed Rehabilitation and Detention Facility project would include an enhanced ventilation system to ensure that indoor air quality for inmates and staff is not unduly affected by the poor air quality in the project vicinity (as indicated by the mapped Air Pollutant Exposure Zone). Thus, the appellant's concern related to potential air quality impacts on future inmates of the proposed Rehabilitation and Detention Facility while exercising in outdoor yards and the adequacy of the air quality analysis conducted for the PMND is not founded in fact because it is premised on a misunderstanding of the graphics provided with the PMND. No further response is required.

WIND

WIND CONCERN 1: The appellant asserts that the wind impact analysis in the Preliminary Mitigated Negative Declaration is flawed because it underestimates potentially significant impacts. The appellant asserts that the finding of a less-than-significant impact is due to the absence of consideration for the effects of the 15-foot-tall mechanical penthouse on the roof and reliance on the shielding effects of the Hall of Justice, which would be demolished in the future.

"4. Wind impacts are underestimated and potentially significant

"The PMND argument that "the proposed project would result in a less-than-significant impact related to wind hazards" (PMND, p. 139) relies on the fact that "the proposed Jail ("RDF") would not be taller than the existing 117-foot-tall Hall of Justice." (PMND, p. 139) However, there are significant errors in this purported fact. The wind analysis section identifies the new building as 95 feet high (PMND, p. 138) while elsewhere it is proposed as 95 feet high plus a 15-foot tall mechanical penthouse (PMND, p. 5). The project drawings indicate that the mechanical penthouse would occupy approximately 80% of the building roof area. (PMND, p. 9-12). The wind impact should thus be analyzed for a 110-foot tall building, which seems to be a basic error in the wind impact assessment.

"A potentially greater error lies in the reliance on the existing Hall of Justice as part of the wind assessment. The Jail ("RDF") project is only one piece of the larger Justice Facilities Improvement Program, which intends to demolish the majority of the Hall of Justice building "once all occupants are relocated." (http://www.sfdpw.org/index.aspx?page=127) Because the Jail ("RDF") proposal is the most complex and costly portion of the JFIP program, it is reasonable to assume that if the proposed project is built the Hall of Justice demolition will follow. In fact, the current project is proposed in order to enable the demolition of the Hall of Justice. The demolition of part of the Hall of Justice would significantly alter the wind dynamics in
the area, yet the PMND wind assessment does not include the impact of the intended outcome of the proposed project. The PMND should not be approved with a flawed wind assessment.” (Californians United for a Responsible Budget)

RESPONSE TO WIND CONCERN 1: The wind impact analysis on PMND pp. 136-139 is based on the screening-level wind analysis prepared by Rowan Williams Davies & Irwin, Inc. (RWDI) and provided as Appendix G to the PMND. The determination in the PMND is based on the professional opinion of RWDI staff and their understanding of the interaction between prevailing winds and the height, massing, and orientation (or profiles) of buildings/structures (see PMND p. 136 and Appendix G, p. 5).

The wind impact analysis focuses on the potential for changes to the ground-level wind speeds along public sidewalks in the vicinity of the proposed Rehabilitation and Detention Facility — Ahern Way, Sixth Street, Bryant Street, and Harriet Street — and entries to the proposed Rehabilitation and Detention Facility (west sidewalk of Sixth Street). Determinations of significance are made by comparing existing conditions to conditions with implementation of the proposed project and are based on the City’s wind comfort and wind hazard criteria (see PMND, p. 138 footnote 122).

The wind impact analysis considers the direction of the prevailing winds, which come from the west-southwest through to the northwest (see PMND p. 137), existing conditions in the immediate vicinity of the project building site, which includes the 117-foot-tall Hall of Justice immediately to the west of the project building site, and the massing of the proposed Rehabilitation and Detention Facility (at 95 feet). The 15-foot-tall mechanical penthouse for the proposed Rehabilitation and Detention Facility would be located on the central portion of the roof and would be set back from the building façades. Thus, wind that would be intercepted by this structure would be redirected down onto the roof and would not contribute to accelerated ground-level wind speeds. Therefore, the identification of the proposed Rehabilitation and Detention Facility as a 95-foot tall building is not a flaw because the 15-foot-tall mechanical penthouse is not a determining factor in the wind impact analysis in the PMND.

As discussed on PMND pp. 137-138 the 117-foot-tall Hall of Justice, which is upwind of the proposed building site, is properly considered as part of the existing baseline conditions along with other structures in the immediate vicinity and beyond. Any consideration of altering existing baseline conditions by assuming the demolition Hall of Justice would go against standard practice for the San Francisco Planning Department and introduce an error into the proposed project’s wind impact analysis. Furthermore, the demolition of the Hall of Justice is not a project that could be considered for a cumulative analysis by the Planning Department because it has not been formally proposed. When, and if, the Hall of Justice were to be demolished it would have to go through a separate environmental review, and, at that point in time, the potential wind impacts of that project would consider the proposed Rehabilitation and Detention Facility as part of its baseline (or existing conditions), assuming the proposed project
is approved and a new HOJ building is constructed. Therefore, the wind impact analysis correctly relies on the combined sheltering effect of the Hall of Justice and the proposed Rehabilitation and Detention Facility as the basis for making a less-than significant determination for project-related wind impacts on the adjacent Sixth Street and Bryant Street sidewalks, and the Sixth Street entries to the proposed Rehabilitation and Detention Facility. As discussed on PMND p. 139, the sidewalks on Ahern Way and Harriet Street would have limited public use due to the location of the proposed loading and jail transport areas. The wind impact analysis discloses the fact that the west façade of the proposed Rehabilitation and Detention Facility would intercept the prevailing winds and direct them downward to the sidewalks on Ahern Way and Harriet Street and found that wind impacts on these sidewalks would be less than significant. This determination would not change if the Hall of Justice were to be demolished, because the proposed Rehabilitation and Detention Facility would continue to provide a sheltering effect at these locations ensuring that ground level wind speeds would remain at acceptable levels.

Thus, the appellant's concerns that wind impacts are underestimated and that potentially significant impacts could occur due to the rooftop mechanical penthouse of the proposed Rehabilitation and Detention Facility and the reliance on the sheltering effect of the existing 117-foot-tall Hall of Justice are based on a misunderstanding of the City's approach to wind impact analyses. No further response is required.

ALTERNATIVES

ALTERNATIVES CONCERN 1: The appellant states that the proposed project to expand jail facilities has significant environmental impacts that require that an EIR be prepared, and an EIR would benefit the public by including an analysis of alternatives that would be preferable under CEQA, such as the no-project alternative or health-based alternative programs that could serve the same population prior to incarceration at lower cost with a net benefit to public safety and a reduction in social injustices from the proposed jail expansion.

"The Preliminary Mitigated Negative Declaration (PMND) failed to study significant environmental impacts regulated by CEQA. Because these impacts exist and have not been mitigated, the project must be further studied. We strongly urge that this study be conducted through a full Environmental Impact Report process so that public comments can be more thoroughly included and so that alternatives - including a no-build alternative - can be compared. Alternatives to the proposed project could be not only preferable under CEQA, but would also be lower cost measures and avoid the harsh social injustices of the proposed jail expansion."

..."5. A Full EIR will result in choosing a better alternative

"Lastly, we would like to observe some the limitations of the proposed project approval by Negative Declaration. By choosing to (incorrectly) identify the project as one without
significant environmental impacts, the project sponsors have avoided the time and cost but also the beneficial public input that would be part of a more thorough vetting of the project through CEQA's EIR process. The EIR process requires study of alternatives to the proposed project, generally including a no-build alternative. As we and many other San Francisco residents have already stated in public comments on this EIR and elsewhere, better alternatives to this project are not hard to find. For instance, an expanded Pretrial Diversion program could reduce the need for jail housing by hundreds of people, yet it was studied as an alternative to this expensive and negatively impactful proposal. It is also widely recognized that many people in jail have substance abuse and/or mental health problems. Instead of proposing to treat these vulnerable community members with relatively expensive and poorly performing interventions in a jail setting; public health based alternative programs, including residential programs, could serve the same population at lower cost, with greater effectiveness, and with a net benefit to public safety, by intervening before crimes have occurred. Again, such alternatives have not been studied, and will not be studied if this PMND is approved."

(Californians United for a Responsible Budget)

RESPONSE TO ALTERNATIVES CONCERN 1: Appellants' assertion that the proposed project would have significant environmental impacts and therefore requires preparation of an EIR is not supported. The preparation of an EIR is required when a proposed project could result in significant impacts; however, a Mitigated Negative Declaration is appropriate when revisions to the proposed project and mitigation measures agreed to by the project sponsor would avoid or reduce impacts such that clearly no significant impacts would occur. While an EIR must include an analysis of alternatives that would reduce or avoid one or more of the significant impacts identified in the EIR, no such analysis is required in an Initial Study that supports issuance of a Mitigated Negative Declaration. As discussed throughout the Mitigated Negative Declaration for the Rehabilitation and Detention Facility Project, the proposed project would not result in significant physical environmental impacts that could not be mitigated to a less-than-significant level; therefore, no EIR is required.

The Appellants may misunderstand portions of the proposed project, which is to replace the existing County jail facilities CJ#3 and CJ#4 in the Hall of Justice. Thus, the proposed project would not expand the City's jail facilities, but in fact would result in 265 fewer beds than the facilities that are being replaced, as explained in the MND/Initial Study on p. 7 (see also the discussion of Travel Demand from the proposed RDF on p. 64 and the discussion of air quality issues in Impact AQ-3 on p. 126).

Studies prepared for the Sheriff's Department indicate that the overall jail population has been declining and is expected to continue to decline over time and the average length of stay has
also declined. The recommendation in the Jail Population Study Update memorandum is to replace the 905 beds in County Jails 3 and 4 with up to 601 beds in the replacement facility if it is assumed that the existing County Jail #6 is not in use. Thus, the proposed project would result in a reduction in the total number of jail beds.

The purpose of analyzing alternatives in an EIR is to focus on alternatives that could avoid or substantially lessen significant physical impacts that would be caused by a proposed project (CEQA Guidelines §15126.6(b)). The effectiveness of treatment programs for jail inmates, provision of additional residential programs for the homeless such as those being carried out by the Mayor’s Office HOPE programs, or expansion of the existing San Francisco Pretrial Diversion Project programs, which may reduce the jail population, are social issues that would not be addressed in an analysis of alternatives to the proposed Rehabilitation and Detention Facility if an EIR were to be required.

ISSUES RAISED IN ADDITIONAL LETTERS

In addition to the comments raised in the appeal letter, comments from letters received during the PM ND public review period raise additional issues. The general concerns of the comments fall into several categories of issues: Project Description, Population and Housing, Historic and Archaeological Resources, Transportation and Circulation, Noise, Shadow, Utilities and Service Systems, Hazards and Hazardous Materials, and General. These concerns are summarized below and addressed in one master response that corresponds to the topic order.

Project Description

Issue:
- Undisclosed plans to use the mezzanine level for additional beds
- Rejection of San Bruno facility rehabilitation based on inaccurate information about costs and transportation issues
- Permanent displacement of established businesses

Population and Housing

Issue
- Loss of jobs related to McDonald’s and parking

4 Jay Liao, Kyle Patterson, and Matt Podin, San Francisco Controller’s Office, Memorandum to Sheriff Ross Mirkarimi, “Jail Population Study Update,” May 28, 2014, pp. 3 and 5. A copy of this document is available for public review at the San Francisco Planning Department, 1650 Mission Street, Suite 400, as part of Case File No. 2014.0198E.
Cultural and Paleontological Resources

Issues:
- Impacts on the California Register-eligible Hall of Justice and on historic buildings at 480-484 Sixth Street and 887-891 Bryant Street
- Excavation impacts on archaeological resources including Native American burial sites
- Vibration impacts on archaeological resources
- Inaccurate level of significance conclusion regarding discovery of Native American burials and attendant delays in excavation

Transportation and Circulation

Issue:
- Need for plans to support or subsidize transportation for construction workers or affected residents, and to reduce traffic congestion; and impacts from increased traffic

Noise

Issue:
- Insufficient study of noise impacts, especially those related to the Bessie Carmichael Elementary School

Shadow

Issues:
- Cumulative shadow impacts on Victoria Manalo Draves Park and conflict with General Plan policies relating to preservation of sunlight on open spaces

Utilities and Service Systems

Issues:
- Appropriateness of using water resources for a jail during the drought
- Insufficient study of water quality impacts

Hazards and Hazardous Materials

Issues:
- Absence of soil sampling
- Need to analyze site soils for toxins that could become airborne

General

Issues:
Appropriateness of using tax dollars to build a new jail rather than allocating funds to services and uses such as schools, affordable housing, health care, mental health, and open space

Social issues such as human rights violations, root causes of poverty and homelessness, and concern that a PMND was prepared for the proposed project rather than an EIR because the City wants a “blank check” for the project and will use the facility to incarcerate the homeless as part of gentrification

MASTER RESPONSE

The comments do not provide evidence or argument to support the issues raised. With regard to the issue about rejecting use of the San Bruno Jail, County Jail #5 at San Bruno is currently in use; rehabilitation of the old jail facility at San Bruno (CJ#6) to house jail inmates could occur in the future, but was not analyzed as an alternative to the proposed RDF site because of the cost and time required to transport inmates to the courts in San Francisco for hearings compared to the cost and time to transport them from the proposed RDF to the adjacent courts in the Hall of Justice. The comment does not identify what inaccuracies there might be regarding cost to transport inmates from San Bruno to San Francisco. As explained in the Responses to Alternatives Issues, above, a MND is not required to analyze alternatives to the proposed project.

The other issues raised in these comments are addressed in the Initial Study, as follows:

Use of mezzanines (which would not increase the total number of beds) is discussed in the Initial Study on pp. 8 and 13, and the total number of beds proposed is on Initial Study p. 7.

Existing businesses are described on Initial Study p. 4.

Employment at the project site is discussed in Section E.2, Population and Housing, pp. 35-39.

Impacts on historic and archaeological resources are analyzed in Section E.3, Cultural and Paleontological resources, pp. 40-54.

Transportation and circulation impacts are analyzed in Section E.4, Transportation and Circulation, pp. 54-89.

Noise impacts to sensitive receptors, are analyzed in Section E.5, Noise, pp. 89-111. Bessie Carmichael Elementary School is noted as a sensitive receptor on Initial Study p. 95, but is not specifically analyzed in the impact analyses because it is across the freeway and at a much greater distance from the project site than the sensitive residential uses at 480-488 Sixth Street which is adjacent to the project site. As no
significant and unmitigable noise impacts were identified for the nearby residential use, and noise levels from the proposed project would be less at greater distances from the project site, there is no need to separately discuss noise impacts at the school.

Section E.8, Wind and Shadow, discusses cumulative shadow impacts, specifically net new shadow on Victoria Manalo Draves Park, on PMND pp. 147-149. As discussed on PMND pp. 142-143 the proposed RDF would cast net new shadow on the southeastern portion of Victoria Manalo Draves Park between February 3 and April 25 and between August 17 and November 7. The cumulative analysis was based on the technical background study (see PMND Appendix H: Shadow Analysis Report for the Proposed Hall of Justice Rehabilitation and Detention Facility per San Francisco Planning Code Section 295 Standards). As discussed on PMND pp. 148 the proposed project would not combine with shadow from cumulative projects because the shadows would not occur on the same portion of the park, i.e. the proposed project's net new shadow would fall on the southeastern portion of the park while net new shadow from the cumulative projects would fall on the northern portion of the park.

Water supply, quality, and systems are described in Section E.10, Utilities and Service Systems, pp. 152-158, and Section E.14, Hydrology and Water Quality, pp. 175-194.

Section E.15, Hazards and Hazardous Materials, pp. 195-211, addresses the potential soil contamination on the project site from past uses.

The Planning Department finds that the concerns stated by the commenters on the PMND do not raise any issues not already addressed in the PMND. The Department's responses rely on summary text from the full CEQA record, which includes the PMND and background studies, and other documents and information in the record as appropriate. The issues listed under General concern social issues and do not raise any specific environmental issues that require discussion in the CEQA document. Decision-makers may consider these issues during their determination as to whether to approve the proposed project.

CONCLUSION

Staff recommends that the Planning Commission adopt the motion to uphold the Preliminary Mitigated Negative Declaration. No substantial evidence supporting a fair argument that a significant environmental effect may occur as a result of the project has been presented that would warrant preparation of an Environmental Impact Report. By upholding the PMND (as recommended), the Planning Commission would not prejudice or restrict its ability to consider whether the proposed project's uses or design are appropriate for the neighborhood.
Exhibit B

Appeal Letter from Californians United for a Responsible Budget
Dear Planning Department,

We are writing to appeal the approval of the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The Preliminary Mitigated Negative Declaration (PMND) failed to study significant environmental impacts regulated by CEQA. Because these impacts exist and have not been mitigated, the project must be further studied. We strongly urge that this study be conducted through a full Environmental Impact Report process so that public comments can be more thoroughly included and so that alternatives — including a no-build alternative — can be compared.

Alternatives to the proposed project could be not only preferable under CEQA, but would also be lower cost measures and avoid the harsh social injustices of the proposed jail expansion. But with or without and EIR process, the Preliminary Mitigated Negative Declaration as currently written should be rejected because of its serious flaws.

1. Air quality and noise impacts on building occupants' outdoor space are not assessed and are potentially significant

The PMND recognizes that people being held in jail are “sensitive receptors” and that podular housing units are a sensitive land use for the purposes of CEQA air quality assessment, (PMND, p. 123-124, 128) and that the project is located in an Air Pollutant Exposure Zone. (PMND, p. 128) The PMND asserts that an Enhanced Ventilation Proposal approved by the Department of Public Health will be sufficient to mitigate the exposure of sensitive receptors to increased pollutant exposure. However, unlike other residential occupancies, people in jail are restrained not only in the indoor air quality they are exposed to but in their access to healthy outdoor air. In particular, the proposed building designs indicate that people in jail will be required to exercise and have outdoor recreation in yards that face Highway 101 to the west (PMND, p. 15-17). The proposed Enhanced Ventilation Proposal does not mitigate exposure to the dangerous air quality inherent in the proposed project site’s outdoor areas. In fact, the building design of stacked, semi-enclosed yards facing into the prevailing winds coming across the freeway may well exacerbate already unacceptable outdoor air quality in the area. The potentially significant health impacts of having restricted outdoor spaces in an Air Pollutant Exposure Zone with designs that may concentrate pollutant levels have not even been studied in the MPND, let alone mitigated.

In addition, the noise levels for the outdoor yards are unacceptable. Although they have not been
assessed within the PMND (which is its an error with the PMND), they can be expected to be at least as loud as current outdoor measurements at a similar elevation in the vicinity. Elevation is an important factor to accurately reflect the distribution of freeway noise that is louder above and lower below the roadway guardrail height.) In fact, the partial enclosure of the proposed outdoor yards would likely reflect sound to increase noise levels. The PMND notes that “background noise levels (at or above the freeway elevation) were found to be 79 dBA (Ldn) near the northern façade (closest to the freeway) and 75 dBA (Ldn) near the southern façade (mid-block).” (PMND, p. 106-107) The most relevant categories from San Francisco’s Land Use Compatibility Chart for Community Noises are “Outdoor Spectator Sports,” which “should not be undertaken” in areas where outdoor noise is above levels of 73 dBA, and Playgrounds, which “should not be undertaken” in areas where outdoor noise is above 75 dBA. (PMND, p. 97) Freeway noise levels are projected to increase by as much as 2.4 dBA in the future (PMND, p. 110). Noise is already recognized to be an additional source of stress within the jail environment, and outdoor spaces are generally one of a very few opportunities people in jails have to experience a less stressful environment. (Richard Wener, “The Environmental Psychology of Prisons and Jails,” Ch. 9 – “The Effects of Noise in Correctional Settings”; Cambridge University Press, 2012.) The proposed site is fundamentally incompatible with acceptable outdoor recreation, but the PMND has not studied, let alone mitigated, these conditions for the project.

While the inadequate level of study alone should result in rejection of the PMND, we would like to observe that the negative impacts of being forced to live in an extremely noisy Air Pollutant Exposure Zone are not borne equally by all sectors of San Francisco’s population. Many observers, including the San Francisco Sheriff, have noted the gross over-representation of people of color and specifically African-Americans in San Francisco’s jails. African-Americans are approximately 6% of San Francisco’s population but 56% of the county jail population. (Office of the Controller: “County Jail Needs Assessment,” August 15, 2012, p. 11 - http://www.sfsheriff.com/files/sf_jail_needs_8_2013.pdf) In addition, approximately 75% of people in jail are awaiting trial, most of whom can not afford bail but are not offered alternatives means of awaiting trial in the community because of under-funding of the Sheriff’s Pretrial Services Division. While we recognize that funding for local programs is not directly a CEQA concern, Environmental Justice is an appropriate concern for environmental planning documents. In the case of the proposed project, the negative health impacts of being forced to spend one’s only outdoor time in a noisy enclosed yard whose only open side is immediately adjacent to the most crowded freeway will be focused especially on poor African-Americans and people of color.

2. Project fails to comply with San Francisco Proposition M

As noted in the PMND, “Prior to issuing a permit for any project which requires an Initial Study under CEQA, prior to issuing a permit for any demolition, conversion, or change of use, and prior to taking any action which requires a finding of consistency with the General Plan, the City is required to find that the proposed project or legislation would be consistent with the Priority Policies.” (PMND, p. 28) Priority Policy #2 is “2) conservation and protection of existing housing and neighborhood character to preserve the cultural and economic diversity of neighborhoods;” #3 is “preservation and enhancement of affordable housing;” and #5 is “5) protection of industrial and service land uses from commercial office development and enhancement of resident employment and business ownership.” (PMND, p. 27) However, the project includes potential displacement of 14 units of existing affordable “SRO” housing: “If relocation of the building
tenants is determined necessary, it is likely that the building could accommodate future commercial/office uses.” (PMND, p. 8) The potential “residential relocation plan” to be drafted by a different City department is not part of the PMND and may face significant hurdles. As is well known, the current supply of affordable rental housing in San Francisco is in a total state of crisis due to rising rents and the widespread use of eviction against low-income tenants. Waiting lists for public and affordable housing are years-long. San Francisco Housing Authority recognizes that “The demand for low-income housing in San Francisco far exceeds available units.” (http://www.sfha.org/Residents-Applicants.html) SFHA advises low-income tenants, “in many cases, you may have to wait 4 to 9 years before your name will reach the top of the List.” (http://www.sfha.org/FAQ-s.html) And at present, the waitlist for Section 8 housing is currently closed, and only 3 units were listed on their availability page within the past two years. (http://sfha.org/Information--Section-8.html, http://sfha.gosection8.com/SearchRentals.aspx)

In the current affordable housing crisis it is unrealistic in the extreme to assume that the Real Estate Division of the San Francisco General Services Agency has the funding or ability to acquire – even on a temporary basis – 14 units of affordable housing if the Housing Authority, which has the specific charge to find such units and lease them through Section 8 – cannot even accomplish this. Loss of the units violates Priority Policy #2 and #3; insofar as the area around this building is zoned SAL1 (Service/Arts/Light Industrial), conversion of the SRO into commercial/office uses would further violate Priority Policy #5 by encroaching such uses into an industrial and service land-use area.

The PMND fails to comply with the City and County of San Francisco’s Priority Policies #2, #3, and #5 and so should be rejected.

3. Parking impacts are not mitigated, but the project is not an employment center project

The PMND claims that “aesthetics and parking are no longer to be considered in determining if a project has the potential to result in significant environmental effects” per Public Resources Code Section 21099(d), effective January 1, 2014 (“aesthetics and parking impacts of a residential, mixed-use residential, or employment center project on an infill site located within a transit priority area shall not be considered significant impacts on the environment”) because the proposal is an “employment center project” (PMND, p. 31, 79). However, Public Resources Code Section 21099(1)(a) clearly states “Employment center project’ means a project located on property zoned for commercial uses with a floor area ratio of no less than 0.75 and that is located within a transit priority area.” The PMND states multiple times that the zoning from the project site is currently SAL1 (Service/Arts/Light Industrial) and is proposed to be changed to P (Public Use) (PMND p.2, 5, etc.) The project is not an “employment center project” because it is not on a parcel zoned for commercial uses – it is proposed to be zoned for public non-commercial uses. Thus parking impacts must be considered potentially significant unmitigated environmental impacts.

The PMND’s “informational” parking analysis indicates that the project will result in the removal of 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. In addition, the project is projected to create a net increase of 47 new FTE employees (PMND, p. 36) creating a net new parking demand of 10 spaces for the Jail (“RDF”) portion, plus 26 more for the proposed reuse of 480-484 Sixth St. The PMND notes that “during field surveys on-street
parking spaces on Harriet Street, Ahern Way, and Sixth Street were at or close to 100 percent occupied throughout the day,” and that “visitors or others that utilize the on-street parking on Harriet Street, Ahern Way, and Sixth Street would need to be accommodated elsewhere in the project vicinity, either on street or in other off-street facilities.” (PMND, p. 80.) The PMND concludes that “the net new project parking demand, and the demand associated with the parking spaces that would be eliminated, would need to be accommodated on-street or within nearby off-street facilities, and area-wide parking occupancy would increase further” – but the project includes no such accommodation. While the PMND speculates that “under cumulative conditions, as under existing conditions, due to the difficulty in finding on-street parking in the study area, some drivers may park outside of the study area, switch to transit, car-sharing, carpooling, walking, or bicycling.” (PMND, p. 89) However, the project includes no significant transit, car-sharing, carpooling, walking, or bicycling improvements, exacerbating the potentially significant unmitigated environmental impacts created by the parking impacts.

In fact, the PMND even recognizes that “considering cumulative parking conditions, over time, due to the land use development and increased density anticipated within the City, parking demand and competition for on- and off-street parking is likely to increase.” (PMND, p. 88) It also recognizes – but fails to study – “secondary physical impacts associated with constrained supply (e.g., queuing by drivers waiting for scarce on-site parking spaces that affects the public right-of-way)” and circling by rivers looking for parking spaces. (PMND, p. 79) The traffic analysis indicates that 4 of the 5 studied intersections already experience a Level of Service score of C or worse (1 is an F) at peak times (PMND, p. 59). Adding more vehicles to these congested conditions will aggravate traffic conditions and create more local air pollution and other potentially significant unmitigated environmental impacts.

In summary, the increased parking demand on both on-street and off-street parking spaces is clearly an unmitigated environmental impact. The unmitigated parking impacts could give rise to further unmitigated impacts on traffic and air quality. If for no other reason, the PMND should be rejected.

4. Wind impacts are underestimated and potentially significant

The PMND argument that “the proposed project would result in a less-than-significant impact related to wind hazards” (PMND, p. 139) relies on the fact that “the proposed Jail (“RDF”) would not be taller than the existing 117-foot-tall Hall of Justice.” (PMND, p. 138) However, there are significant errors in this purported fact. The wind analysis section identifies the new building as 95 feet high (PMND, p. 138) while elsewhere it is proposed as 95 feet high plus a 15-foot tall mechanical penthouse (PMND, p. 5). The project drawings indicate that the mechanical penthouse would occupy approximately 80% of the building roof area. (PMND, p. 9-12). The wind impact should thus be analyzed for a 110-foot tall building, which seems to be a basic error in the wind impact assessment.

A potentially greater error lies in the reliance on the existing Hall of Justice as part of the wind assessment. The Jail (“RDF”) project is only one piece of the larger Justice Facilities Improvement Program, which intends to demolish the majority of the Hall of Justice building “once all occupants are relocated.” (http://www.sfdpw.org/index.aspx?page=127) Because the Jail (“RDF”) proposal is the most complex and costly portion of the JFIP program, it is
reasonable to assume that if the proposed project is built the Hall of Justice demolition will follow. In fact, the current project is proposed in order to enable the demolition of the Hall of Justice. The demolition of part of the Hall of Justice would significantly alter the wind dynamics in the area, yet the PMND wind assessment does not include the impact of the intended outcome of the proposed project. The PMND should not be approved with a flawed wind assessment.

5. A Full EIR will result in choosing a better alternative

Lastly, we would like to observe some the limitations of the proposed project approval by Negative Declaration. By choosing to (incorrectly) identify the project as one without significant environmental impacts, the project sponsors have avoided the time and cost but also the beneficial public input that would be part of a more thorough vetting of the project through CEQA’s EIR process. The EIR process requires study of alternatives to the proposed project, generally including a no-build alternative. As we and many other San Francisco residents have already stated in public comments on this EIR and elsewhere, better alternatives to this project are not hard to find. For instance, an expanded Pretrial Diversion program could reduce the need for jail housing by hundreds of people, yet it was studied as an alternative to this expensive and negatively impactful proposal. It is also widely recognized that many people in jail have substance abuse and/or mental health problems. Instead of proposing to treat these vulnerable community members with relatively expensive and poorly performing interventions in a jail setting; public health based alternative programs, including residential programs, could serve the same population at lower cost, with greater effectiveness, and with a net benefit to public safety, by intervening before crimes have occurred. Again, such alternatives have not been studied, and will not be studied if this PMND is approved.

In closing, for all the reasons listed above, we urge your department to reject the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

Re: 850 Bryant Street-HOJ-Rehabilitation and Detention Facility

Dear Board of Supervisors,

We are writing to appeal the Planning Department’s approval of the Preliminary Mitigated Negative Declaration on June 25, 2015, as well as their rebuttal of the appeal we filed against the Preliminary Mitigated Negative Declaration for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility (RDF) Project.

Importantly, we are including an addendum to this appeal (see below: Addendum), which addresses major concerns with regards to the RDF’s construction plan as laid out in the Preliminary Mitigated Negative Declaration. The current construction plan is in violation of minimum building regulations mandated by the Board of State and Community Corrections, the state agency with the authority to review jail construction plans pursuant to California Penal Code § 6029.

The Preliminary Mitigated Negative Declaration (PMND) failed to study significant environmental impacts regulated by CEQA. Because these impacts exist and have not been mitigated, the project must be further studied. We strongly urge that this study be conducted through a full Environmental Impact Report process so that public comments can be more thoroughly included and so that alternatives – including a no-build alternative – can be compared. Alternatives to the proposed project could be not only preferable under CEQA, but would also be lower cost measures and avoid the harsh social injustices of the proposed jail expansion. But with or without an EIR process, the Preliminary Mitigated Negative Declaration as currently written should be rejected because of its serious flaws.

1. Air quality and noise impacts on building occupants’ outdoor space are not assessed and are potentially significant

The PMND recognizes that people being held in jail are “sensitive receptors” and that podular housing units are a sensitive land use for the purposes of CEQA air quality assessment, (PMND, p. 123-124, 128) and that the project is located in an Air Pollutant Exposure Zone. (PMNd, p. 128) The PMND asserts that an Enhanced Ventilation Proposal approved by the Department of
Public Health will be sufficient to mitigate the exposure of sensitive receptors to increased pollutant exposure. However, unlike other residential occupancies, people in jail are restrained not only in the indoor air quality they are exposed to but in their access to healthy outdoor air. In particular, the proposed building designs indicate that people in jail will be required to exercise and have outdoor recreation in yards that face Highway 101 to the west (PMND, p. 15-17). The proposed Enhanced Ventilation Proposal does not mitigate exposure to the dangerous air quality inherent in the proposed project site’s outdoor areas. In fact, the building design of stacked, semi-enclosed yards facing into the prevailing winds coming across the freeway may well exacerbate already unacceptable outdoor air quality in the area. The potentially significant health impacts of having restricted outdoor spaces in an Air Pollutant Exposure Zone with designs that may concentrate pollutant levels have not even been studied in the MPND, let along mitigated.

In addition, the noise levels for the outdoor yards are unacceptable. Although they have not been assessed within the PMND (which is an error with the PMND), they can be expected to be at least as loud as current outdoor measurements at a similar elevation in the vicinity. (Elevation is an important factor to accurately reflect the distribution of freeway noise that is louder above and lower below the roadway guardrail height.) In fact, the partial enclosure of the proposed outdoor yards would likely reflect sound to increase noise levels. The PMND notes that “background noise levels (at or above the freeway elevation) were found to be 79 dBA (Ldn)74 near the northern façade (closest to the freeway) and 75 dBA (Ldn)75 near the southern façade (mid-block).” (PMND, p. 106-107) The most relevant categories from San Francisco’s Land Use Compatibility Chart for Community Noises are “Outdoor Spectator Sports,” which “should not be undertaken” in areas where outdoor noise is above levels of 73 dBA, and Playgrounds, which “should nor be undertaken” in areas where outdoor noise is above 75 dBA. (PMND, p. 97) Freeway noise levels are projected to increase by as much as 2.4 dBA in the future (PMND, p. 110). Noise is already recognized to be an additional source of stress within the jail environment, and outdoor spaces are generally one of a very few opportunities people in jails have to experience a less stressful environment. (Richard Wener, “The Environmental Psychology of Prisons and Jails,” Ch. 9 – “The Effects of Noise in Correctional Settings”: Cambridge University Press, 2012.) The proposed site is fundamentally incompatible with acceptable outdoor recreation, but the PMND has not studied, let alone mitigated, these conditions for the project.

While the inadequate level of study alone should result in rejection of the PMND, we would like to observe that the negative impacts of being forced to live in an extremely noisy Air Pollutant Exposure Zone are not borne equally by all sectors of San Francisco’s population. Many observers, including the San Francisco Sheriff, have noted the gross over-representation of people of color and specifically African-Americans in San Francisco’s jails. African-Americans are approximately 6% of San Francisco’s population but 56% of the county jail population. (Office of the Controller: “County Jail Needs Assessment,” August 15, 2012, p. 11 - http://www.sfsheriff.com/files/sf_jail_needs_8_2013.pdf) In addition, approximately 75% of people in jail are awaiting trial, most of whom can not afford bail but are not offered alternatives means of awaiting trial in the community because of under-funding of the Sheriff's Pretrial
Services Division. While we recognize that funding for local programs is not directly a CEQA concern, Environmental Justice is an appropriate concern for environmental planning documents. In the case of the proposed project, the negative health impacts of being forced to spend one’s only outdoor time in a noisy enclosed yard whose only open side is immediately adjacent to the most crowded freeway will be focused especially on poor African-Americans and people of color.

2. Project fails to comply with San Francisco Proposition M

As noted in the PMND, “Prior to issuing a permit for any project which requires an Initial Study under CEQA, prior to issuing a permit for any demolition, conversion, or change of use, and prior to taking any action which requires a finding of consistency with the General Plan, the City is required to find that the proposed project or legislation would be consistent with the Priority Policies.” (PMND, p. 28) Priority Policy #2 is “2) conservation and protection of existing housing and neighborhood character to preserve the cultural and economic diversity of neighborhoods;” #3 is “preservation and enhancement of affordable housing;” and #5 is “5) protection of industrial and service land uses from commercial office development and enhancement of resident employment and business ownership.” (PMND, p. 27) However, the project includes potential displacement of 14 units of existing affordable “SRO” housing: “If relocation of the building tenants is determined necessary, it is likely that the building could accommodate future commercial/office uses.” (PMND, p. 8) The potential “residential relocation plan” to be drafted by a different City department is not part of the PMND and may face significant hurdles. As is well known, the current supply of affordable rental housing in San Francisco is in a total state of crisis due to rising rents and the widespread use of eviction against low-income tenants. Waiting lists for public and affordable housing are years-long. San Francisco Housing Authority recognizes that “The demand for low-income housing in San Francisco far exceeds available units.” (http://www.sfha.org/Residents-Applicants.html) SFHA advises low-income tenants, “in many cases, you may have to wait 4 to 9 years before your name will reach the top of the List.” (http://www.sfha.org/FAQ-s.html) And at present, the waitlist for Section 8 housing is currently closed, and only 3 units were listed on their availability page within the past two years. (http://sfha.org/Information--Section-8.html, http://sfha.goSection8.com/SearchRentals.aspx)

In the current affordable housing crisis it is unrealistic in the extreme to assume that the Real Estate Division of the San Francisco General Services Agency has the funding or ability to acquire – even on a temporary basis – 14 units of affordable housing if the Housing Authority, which has the special charge to find such units and lease them through Section 8 – cannot even accomplish this. Loss of the units violates Priority Policy #2 and #3; insofar as the area around this building is zoned SALI (Service/Arts/Light Industrial), conversion of the SRO into commercial/office uses would further violate Priority Policy #5 by encroaching such uses into an industrial and service land-use area.

The PMND fails to comply with the City and County of San Francisco’s Priority Policies #2, #3, and #5 and so should be rejected.
3. Parking impacts are not mitigated, but the project is not an employment center project

The PMND claims that “aesthetics and parking are no longer to be considered in determining if a project has the potential to result in significant environmental effects” per Public Resources Code Section 21099(d), effective January 1, 2014 (“aesthetics and parking impacts of a residential, mixed-use residential, or employment center project on an infill site located within a transit priority area shall not be considered significant impacts on the environment”) because the proposal is an “employment center project” (PMND, p. 31, 79). However, Public Resources Code Section 21099(1)(a) clearly states “Employment center project’ means a project located on property zoned for commercial uses with a floor area ratio of no less than 0.75 and that is located within a transit priority area.” The PMND states multiple times that the zoning from the project site is currently SALI (Service/Arts/Light Industrial) and is proposed to be changed to P (Public Use) (PMND p.2, 5, etc.) The project is not an “employment center project” because it is not on a parcel zoned for commercial uses - it is proposed to be zoned for public non-commercial uses. Thus parking impacts must be considered potentially significant unmitigated environmental impacts.

The PMND’s “informational” parking analysis indicates that the project will result in the removal of 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. In addition, the project is projected to create a net increase of 47 new FTE employees (PMND, p. 36) creating a net new parking demand of 10 spaces for the Jail (“RDF”) portion, plus 26 more for the proposed reuse of 480-484 Sixth St. The PMND notes that “during field surveys on-street parking spaces on Harriet Street, Ahern Way, and Sixth Street were at or close to 100 percent occupied throughout the day,” and that “visitors or others that utilize the on-street parking on Harriet Street, Ahern Way, and Sixth Street would need to be accommodated elsewhere in the project vicinity, either on street or in other off-street facilities.” (PMND, p. 80.) The PMND concludes that “the net new project parking demand, and the demand associated with the parking spaces that would be eliminated, would need to be accommodated on-street or within nearby off-street facilities, and area-wide parking occupancy would increase further” - but the project includes no such accommodation. While the PMND speculates that “under cumulative conditions, as under existing conditions, due to the difficulty in finding on-street parking in the study area, some drivers may park outside of the study area, switch to transit, car-sharing, carpooling, walking, or bicycling.” (PMND, p. 89) However, the project includes no significant transit, car-sharing, carpooling, walking, or bicycling improvements, exacerbating the potentially significant unmitigated environmental impacts created by the parking impacts.

In fact, the PMND even recognizes that “considering cumulative parking conditions, over time, due to the land use development and increased density anticipated within the City, parking demand and competition for on- and off- street parking is likely to increase.” (PMND, p. 88) It also recognizes - but fails to study - “secondary physical impacts associated with constrained supply (e.g., queuing by drivers waiting for scarce on-site parking spaces that affects the public
right-of-way)" and circling by rivers looking for parking spaces. (PMND, p. 79) The traffic analysis indicates that 4 of the 5 studied intersections already experience a Level of Service score of C or worse (1 is an F) at peak times (PMND, p. 59). Adding more vehicles to these congested conditions will aggravate traffic conditions and create more local air pollution and other potentially significant unmitigated environmental impacts.

In summary, the increased parking demand on both on-street and off-street parking spaces is clearly an unmitigated environmental impact. The unmitigated parking impacts could give rise to further unmitigated impacts on traffic and air quality. If for no other reason, the PMND should be rejected.

4. Wind impacts are underestimated and potentially significant

The PMND argument that “the proposed project would result in a less-than-significant impact related to wind hazards” (PMND, p. 139) relies on the fact that “the proposed Jail (“RDF”) would not be taller than the existing 117-foot-tall Hall of Justice.” (PMND, p. 138) However, there are significant errors in this purported fact. The wind analysis section identifies the new building as 95 feet high (PMND, p. 138) while elsewhere it is proposed as 95 feet high plus a 15-foot tall mechanical penthouse (PMND, p. 5). The project drawings indicate that the mechanical penthouse would occupy approximately 80% of the building roof area. (PMND, p. 9-12). The wind impact should thus be analyzed for a 110-foot tall building, which seems to be a basic error in the wind impact assessment.

A potentially greater error lies in the reliance on the existing Hall of Justice as part of the wind assessment. The Jail (“RDF”) project is only one piece of the larger Justice Facilities Improvement Program, which intends to demolish the majority of the Hall of Justice building “once all occupants are relocated.” (http://www.sfdepw.org/index.aspx?page=127) Because the Jail (“RDF”) proposal is the most complex and costly portion of the JFIP program, it is reasonable to assume that if the proposed project is built the Hall of Justice demolition will follow. In fact, the current project is proposed in order to enable the demolition of the Hall of Justice. The demolition of part of the Hall of Justice would significantly alter the wind dynamics in the area, yet the PMND wind assessment does not include the impact of the intended outcome of the proposed project. The PMND should not be approved with a flawed wind assessment.

5. A Full EIR will result in choosing a better alternative

Lastly, we would like to observe some the limitations of the proposed project approval by Negative Declaration. By choosing to (incorrectly) identify the project as one without significant environmental impacts, the project sponsors have avoided the time and cost but also the beneficial public input that would be part of a more thorough vetting of the project through CEQA’s EIR process. The EIR process requires study of alternatives to the proposed project, generally including a no-build alternative. As we and many other San Francisco residents have already
stated in public comments on this EIR and elsewhere, better alternatives to this project are not hard to find. For instance, an expanded Pretrial Diversion program could reduce the need for jail housing by hundreds of people, yet it was studied as an alternative to this expensive and negatively impactful proposal. It is also widely recognized that many people in jail have substance abuse and/or mental health problems. Instead of proposing to treat these vulnerable community members with relatively expensive and poorly performing interventions in a jail setting; public health based alternative programs, including residential programs, could serve the same population at lower cost, with greater effectiveness, and with a net benefit to public safety, by intervening before crimes have occurred. Again, such alternatives have not been studied, and will not be studied if this PMND is approved.

In closing, for all the reasons listed above, we urge your department to reject the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.

According to the California Register of Historical Resources, the Hall of Justice is eligible for listing in the California Register because of the many high-profile trials that took place there and the central role it played in several notable protests led by community activists in San Francisco during the 1960s, 1970s, 1980s, and 1990s. This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.

Digging a pedestrian tunnel to transport prisoners would require approximately 18,000 cubic yards of soil to be removed from the project site and would have significant archeological impact in an area known to contain archeological resources from the "prehistoric period and Gold Rush Period to later 19th Century." Planners are also "concerned" about vibration levels during construction that could significantly damage more local archaeological resources.

If any evidence of Native American burials are found, there is a 6 day window to figure out what to do with the remains, and the
planners would be forced to delay excavation for up to four weeks. The planners have deemed this aspect of their project "less than significant."

Filtration can provide people in jail with decent air quality, but how about during outdoor time? Having "outdoor" yards right next to a freeway is potentially quite dangerous; in the proposed design, the yards face the freeway. The design of the semi-enclosed yards may actually concentrate freeway pollution. They did not study this.

The wind analysis may have used the wrong height, 95 instead of 110, and did not include the future plan to demolish the Hall of Justice (HOJ).

There is a great deal that the planners did not plan for in this preliminary report.

For these reasons and many more, the project should be further studied and the Preliminary Mitigated Negative Declaration should not be approved. A new jail will not only be terrible for the environment, but will be terrible for San Francisco and its residents.

Comment: Dear San Francisco Board of Supervisors, San Francisco Planning Department, and Sheriff Mirkarimi,

On page 136 of the CEQA statutes it states under Mandatory Findings of Significance that a project must declare if, “The environmental effects of a project will cause substantial adverse effects on human beings, either directly or indirectly.”

The World Health Organization defines environmental health as addressing, “all the physical, chemical, and biological factors external to a person, and all the related factors impacting behaviors.” Freeways or polluting factories are obvious forms of pathogenic infrastructure, that is they are physical factors, which cause adverse effects on human beings. Within public health there is a large body of evidence that argues that jails and prisons are types of pathogenic infrastructure that have adverse effects on humans. Jails are physical factors that alter the environment in which San Franciscans live, just as parks increase availability of open space and places to play. They prevent access to services, disrupt ability to work and have “contagion” effects in communities that are disproportionately represented in jails. In San Francisco many of these populations experience high levels of mental health conditions, chronic illness and substance abuse issues. A November 24, 2014 NY Times Op-Ed pulled from a recent report by the Vera Institute of Justice to argue that mass incarceration poses, “one of the greatest public health challenges of modern times.” Jail exacerbates these health concerns, increasing rates of STDs, severity of substance abuse disorders and exposure to violence. The Vera report found nationwide, for example, that suicide accounts for one-third of deaths in jails, and that while 68% of jailed individuals have diagnosable substance abuse disorders, less than 15% receive appropriate treatment. Higher rates of health conditions increase the use of city services, medications, and emergency services such as fire and police and decrease healthy behaviors that have environmental co-benefits such as biking or eating healthy foods.

Under CEQA, it is required that the building of a new jail, as pathogenic infrastructure, must submit additional findings on the adverse effects on human beings that it causes through its environmental effects.

Best,
Amber Akemi Piatt, MPH

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMa in this market; we will lose them forever.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/ Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.

According to the California Register of Historical Resources, the Hall of Justice is eligible for listing in the California Register because of the many high-profile trials that took place there and the central role it played in several notable protests led by community activists in San Francisco during the 1960s, 1970s, 1980s, and 1990s. This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.

Digging a pedestrian tunnel to transport prisoners would require approximately 18,000 cubic yards of soil to be removed from the project site and would have significant archeological impact in an area known to contain archeological resources from the "prehistoric period and Gold Rush Period to later 19th Century." Planners are also "concerned" about vibration levels during construction that could significantly damage more local archaeological resources.

If any evidence of Native American burials are found, there is a 6 day window to figure out what to do with the remains, and the
planners would be forced to delay excavation for up to four weeks. The planners have deemed this aspect of their project "less than significant."

Filtration can provide people in jail with decent air quality, but how about during outdoor time? Having "outdoor" yards right next to a freeway is potentially quite dangerous; in the proposed design, the yards face the freeway. The design of the semi-enclosed yards may actually concentrate freeway pollution. They did not study this. The wind analysis may have used the wrong height, 95 instead of 110, and did not include the future plan to demolish the Hall of Justice (HOJ).

There is a great deal that the planners did not plan for in this preliminary report.

For these reasons and many more, the project should be further studied and the Preliminary Mitigated Negative Declaration should not be approved. A new jail will not only be terrible for the environment, but will be terrible for San Francisco and its residents.

Comment: Dear San Francisco Board of Supervisors, San Francisco Planning Department, and Sheriff Mirkarimi,

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

Public comment on RDF mitigated negative declaration

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project will displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street and will undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMa in this market. Further, the plan does not analyze the impacts of construction during a projected two year period during which the high traffic area at the HWY 80 ramp at 7th and Bryant Sts. Even minor changes to the traffic pattern there substantially disrupt traffic.

The mezzanine level mentioned in the report is not shown in the plans and must be considered in any report on the impacts of the proposed project.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. This project, will cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces. Mitigating the shade is particularly important at this site given the deficit of public green spaces in the immediate area.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This exemption in information raises suspicion as the report addresses the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste precious resources.

According to the California Register of Historical Resources, the Hall of Justice is eligible for listing in the California Register because of the many high-profile trials that took place there and the central role it played in several notable protests led by community activists in San Francisco during the 1960s, 1970s, 1980s, and 1990s. This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.

Digging a pedestrian tunnel to transport prisoners would require approximately 18,000 cubic yards of soil to be removed from the project site and would have significant archeological impact in an area known to contain archeological resources from the "prehistoric period and Gold Rush Period to later 19th Century." Planners are also "concerned" about vibration levels during construction that could significantly damage more local archaeological resources.

Filtration can provide people in jail with decent air quality, but how about during outdoor time? Having "outdoor" yards right next to a freeway is potentially quite dangerous; in the proposed design, the yards face the freeway. The design of the semi-enclosed yards may actually concentrate freeway pollution. The report does not cover this area.
The wind analysis may have used the wrong height, 95 instead of 110, and did not include the future plan to demolish the Hall of Justice (HOJ).

For these reasons and many more, the project should be further studied and the Preliminary Mitigated Negative Declaration should not be approved. A new jail will not only be terrible for the environment, but will be terrible for San Francisco and its residents.

Comment: Dear San Francisco Board of Supervisors, San Francisco Planning Department, and Sheriff Mirkarimi, I ask that you halt all plans for this new prison, as your current prison still has a 35% vacancy. Locking people in cages, around more experienced criminals, only makes them smarter and offers no real solution. We need to offer programs, counseling and assistance, to attack this at the root of the problem.

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

There is a great deal that the planners did not plan for in this preliminary report.

For these reasons and many more, the project should be further studied and the Preliminary Mitigated Negative Declaration should not be approved. A new jail will not only be terrible for the environment, but will be terrible for San Francisco and its residents.

Lastly, there has been absolutely NO concern for the human impact this jail would have...I reject the premise that this is not an environmental concern, especially for an urban space. We need a full analysis of the "no build" option as well as an evaluation of the human impact.

I hope we can count on you to do the RIGHT thing and ensure a full EIR on this unnecessary and harmful project.

According to the California Register of Historical Resources, the Hall of Justice is eligible for listing in the California Register because of the many high-profile trials that took place there and the central role it played in several notable protests led by community activists in San Francisco during the 1960s, 1970s, 1980s, and 1990s. This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.

Digging a pedestrian tunnel to transport prisoners would require approximately 18,000 cubic yards of soil to be removed from the project site and would have significant archeological impact in an area known to contain archeological resources from the "prehistoric period and Gold Rush Period to later 19th Century." Planners are also "concerned" about vibration levels during construction that could significantly damage more local archaeological resources.

If any evidence of Native American burials are found, there is a 6 day window to figure out what to do with the remains, and the
planners would be forced to delay excavation for up to four weeks. The planners have deemed this aspect of their project "less than significant."

Filtration can provide people in jail with decent air quality, but how about during outdoor time? Having "outdoor" yards right next to a freeway is potentially quite dangerous; in the proposed design, the yards face the freeway. The design of the semi-enclosed yards may actually concentrate freeway pollution. They did not study this.
The wind analysis may have used the wrong height, 95 instead of 110, and did not include the future plan to demolish the Hall of Justice (HOJ).

There is a great deal that the planners did not plan for in this preliminary report.

For these reasons and many more, the project should be further studied and the Preliminary Mitigated Negative Declaration should not be approved. A new jail will not only be terrible for the environment, but will be terrible for San Francisco and its residents.

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.

However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.

According to the California Register of Historical Resources, the Hall of Justice is eligible for listing in the California Register because of the many high-profile trials that took place there and the central role it played in several notable protests led by community activists in San Francisco during the 1960s, 1970s, 1980s, and 1990s. This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.

Digging a pedestrian tunnel to transport prisoners would require approximately 18,000 cubic yards of soil to be removed from the project site and would have significant archeological impact in an area known to contain archeological resources from the "prehistoric period and Gold Rush Period to later 19th Century." Planners are also "concerned" about vibration levels during construction that could significantly damage more local archeological resources.

If any evidence of Native American burials are found, there is a 6 day window to figure out what to do with the remains, and the
planners would be forced to delay excavation for up to four weeks. The planners have deemed this aspect of their project "less than significant."

Filtration can provide people in jail with decent air quality, but how about during outdoor time? Having "outdoor" yards right next to a freeway is potentially quite dangerous; in the proposed design, the yards face the freeway. The design of the semi-enclosed yards may actually concentrate freeway pollution. They did not study this. The wind analysis may have used the wrong height, 95 instead of 110, and did not include the future plan to demolish the Hall of Justice (HOJ).

There is a great deal that the planners did not plan for in this preliminary report.

For these reasons and many more, the project should be further studied and the Preliminary Mitigated Negative Declaration should not be approved. A new jail will not only be terrible for the environment, but will be terrible for San Francisco and its residents.

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. Comment: Dear San Francisco Board of Supervisors, San Francisco Planning Department, and Sheriff Mirkarimi,  
I am dismayed to learn of this plan for a new jail— it is simply going to cause more problems than it solves: displacing residents of the SRO, decrease affordable housing, expose more people to exhaust from the freeway, and complicate the already awful parking situation in SF. I urge you to spend money on programs that help people transition out of prison, give something back to the community. This is just a dismal waste of money that will continue the negative cycle of imprisonment and incarceration. Morally, environmentally and fiscally it is unsound.

Comment: Dear San Francisco Board of Supervisors, San Francisco Planning Department, and Sheriff Mirkarimi,

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention center project.

I oppose the construction of a new jail. It's a misuse of our tax dollars, given that the city of San Francisco already has a functioning jail with unoccupied space and given the need for funding for more pressing issues (housing, education, etc).

Please stop this project.

I live in and work in San Francisco. This is a public comment for the Preliminary Mitigated Negative Declaration issued 5/13/2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

This jail would kick out residents of affordable housing units in the midst of the worst housing crisis our city has ever seen. It would displace long-standing local businesses, and destroy at least 43 jobs. This environmental report also fails to sufficiently address air quality for outdoor yards in the jail, whose semi-enclosed design may actually concentrate pollution from the freeway that sits directly next to those yards.

The project would not only displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space used by well-established community businesses. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

The mezzanine level mentioned in the report is not even shown in the plans, and I suspect this is a way to construct more than the projected 640 beds.

The brand-new Victoria Manalo Draves Park is a 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. As such, they are wrong to argue that they are exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a high-demand neighborhood. This requires careful analysis. It also looks like they knew this but untruthfully attempted to claim the "employment center" designation anyway, since they address the two other criteria for CEQA exemption but not the zoning.

The project planners have not addressed loss of parking spots in the community, supporting or subsidizing alternative transportation for construction workers or residents impacted, or reducing traffic or construction worker/resident congestion, and will instead waste our tax money on surveys and hiring unnecessary city workers to monitor the project with no real plans for alleviating the stress and burden this will place on our city.

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and submission of false information regarding transportation of prisoners to and from the downtown courts.

According to California Register of Historical Resources, the Hall of Justice structure is eligible for listing in the California Register because of the many high-profile trials that happened there and the central role it played in several notable protests led by community activists during the 1960s, '70s, '80s, and '90s. This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco-style commercial property.

The digging of a pedestrian tunnel to transport prisoners would require approximately 18,000 cubic yards of soil to be removed.
from the project site and would have significant archaeological impact in an area known to contain archaeological resources from the "prehistoric period and Gold Rush Period to later 19th Century." Planners are also "concerned" about vibration levels during construction significantly damaging local archaeological resources.

If any evidence of Native American burials are found, there is a 5-day window to figure out what to do with the remains, and the planners would be forced to delay excavation for up to four weeks. The planners have deemed this aspect of their project "less than significant."

Filtration can provide people in jail with decent air quality, but how about during outdoor time? Having "outdoor" yards right next to a freeway is potentially quite dangerous; in the proposed design, the yards face the freeway. The design of the semi-enclosed yards may actually concentrate freeway pollution. They did not study this.

Their wind analysis used the wrong height, 95 instead of 110, and did not even include the future plan to demolish the Hall of Justice.

There is a great deal that the planners did not plan for in this preliminary report.

For these reasons and many more, the project should be further studied and the Preliminary Mitigated Negative Declaration should not be approved. A new jail will not only be terrible for the environment, but will be terrible for our city and its residents.

Comment: Dear San Francisco Board of Supervisors, San Francisco Planning Department, and Sheriff Mirkarimi,

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.

According to the California Register of Historical Resources, the Hall of Justice is eligible for listing in the California Register because of the many high-profile trials that took place there and the central role it played in several notable protests led by community activists in San Francisco during the 1960s, 1970s, 1980s, and 1990s. This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.

Digging a pedestrian tunnel to transport prisoners would require approximately 18,000 cubic yards of soil to be removed from the project site and would have significant archaeological impact in an area known to contain archaeological resources from the "prehistoric period and Gold Rush Period to later 19th Century." Planners are also "concerned" about vibration levels during construction that could significantly damage more local archaeological resources.

If any evidence of Native American burials are found, there is a 6 day window to figure out what to do with the remains, and the
planners would be forced to delay excavation for up to four weeks. The planners have deemed this aspect of their project "less than significant."

Comment: Dear San Francisco Board of Supervisors, San Francisco Planning Department, and Sheriff Mirkarimi,  
We don't need any more jails in San Francisco. Just the displacement of families living in the SROs is bad enough.  

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.

According to the California Register of Historical Resources, the Hall of Justice is eligible for listing in the California Register because of the many high-profile trials that took place there and the central role it played in several notable protests led by community activists in San Francisco during the 1960s, 1970s, 1980s, and 1990s. This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.

Digging a pedestrian tunnel to transport prisoners would require approximately 18,000 cubic yards of soil to be removed from the project site and would have significant archeological impact in an area known to contain archeological resources from the "prehistoric period and Gold Rush Period to later 19th Century." Planners are also "concerned" about vibration levels during construction that could significantly damage more local archaeological resources.

If any evidence of Native American burials are found, there is a 6 day window to figure out what to do with the remains, and the...
planners would be forced to delay excavation for up to four weeks. The planners have deemed this aspect of their project "less than significant."

Filtration can provide people in jail with decent air quality, but how about during outdoor time? Having "outdoor" yards right next to a freeway is potentially quite dangerous; in the proposed design, the yards face the freeway. The design of the semi-enclosed yards may actually concentrate freeway pollution. They did not study this. The wind analysis may have used the wrong height, 95 instead of 110, and did not include the future plan to demolish the Hall of Justice (HOJ).

There is a great deal that the planners did not plan for in this preliminary report.

For these reasons and many more, the project should be further studied and the Preliminary Mitigated Negative Declaration should not be approved. A new jail will not only be terrible for the environment, but will be terrible for San Francisco and its residents.

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. Public comment on RDF mitigated negative declaration

Name: Brittaney Barba
Email: brittaney.barba@gmail.com

Comment: Dear San Francisco Board of Supervisors, San Francisco Planning Department, and Sheriff Mirkarimi,

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.

According to the California Register of Historical Resources, the Hall of Justice is eligible for listing in the California Register because of the many high-profile trials that took place there and the central role it played in several notable protests led by community activists in San Francisco during the 1960s, 1970s, 1980s, and 1990s. This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.

Digging a pedestrian tunnel to transport prisoners would require approximately 18,000 cubic yards of soil to be removed from the project site and would have significant archeological impact in an area known to contain archeological resources from the "prehistoric period and Gold Rush Period to later 19th Century." Planners are also "concerned" about vibration levels during construction that could significantly damage more local archeological resources.

If any evidence of Native American burials are found, there is a 6 day window to figure out what to do with the remains, and the
planners would be forced to delay excavation for up to four weeks. The planners have deemed this aspect of their project "less than significant."

Filtration can provide people in jail with decent air quality, but how about during outdoor time? Having "outdoor" yards right next to a freeway is potentially quite dangerous; in the proposed design, the yards face the freeway. The design of the semi-enclosed yards may actually concentrate freeway pollution. They did not study this.
The wind analysis may have used the wrong height, 95 instead of 110, and did not include the future plan to demolish the Hall of Justice (H0J).

There is a great deal that the planners did not plan for in this preliminary report.

For these reasons and many more, the project should be further studied and the Preliminary Mitigated Negative Declaration should not be approved. A new jail will not only be terrible for the environment, but will be terrible for San Francisco and its residents.

I am writing to urge you to not build this new jail. I owe my life to the Walden House In-Patient program, located at 890 Hayes Street. I have been out of the system for nearly a decade. I am the taxpayer and homeowner I am today because of my year in residential treatment. My story is in no way unique. Building a jail merely removes people from sight. It doesn't SOLVE anything.

I am writing to ask that you support drug treatment, not incarceration. There are countless thousands of people who share this story.

Thank you for your consideration.

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.

According to the California Register of Historical Resources, the Hall of Justice is eligible for listing in the California Register because of the many high-profile trials that took place there and the central role it played in several notable protests led by community activists in San Francisco during the 1960s, 1970s, 1980s, and 1990s. This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.

Digging a pedestrian tunnel to transport prisoners would require approximately 18,000 cubic yards of soil to be removed from the project site and would have significant archeological impact in an area known to contain archeological resources from the "prehistoric period and Gold Rush Period to later 19th Century." Planners are also "concerned" about vibration levels during construction that could significantly damage more local archaeological resources.

If any evidence of Native American burials are found, there is a 6 day window to figure out what to do with the remains, and the
planners would be forced to delay excavation for up to four weeks. The planners have deemed this aspect of their project "less than significant."

Filtration can provide people in jail with decent air quality, but how about during outdoor time? Having "outdoor" yards right next to a freeway is potentially quite dangerous; in the proposed design, the yards face the freeway. The design of the semi-enclosed yards may actually concentrate freeway pollution. They did not study this. The wind analysis may have used the wrong height, 95 instead of 110, and did not include the future plan to demolish the Hall of Justice (HOJ).

There is a great deal that the planners did not plan for in this preliminary report.

For these reasons and many more, the project should be further studied and the Preliminary Mitigated Negative Declaration should not be approved. A new jail will not only be terrible for the environment, but will be terrible for San Francisco and its residents.

The design of the semi-enclosed yards may actually concentrate freeway pollution. They did not study this.
The wind analysis may have used the wrong height, 95 instead of 110, and did not include the future plan to demolish the Hall of Justice (HOJ).

There is a great deal that the planners did not plan for in this preliminary report.

For these reasons and many more, the project should be further studied and the Preliminary Mitigated Negative Declaration should not be approved. A new jail will not only be terrible for the environment, but will be terrible for San Francisco and its residents.

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.

According to the California Register of Historical Resources, the Hall of Justice is eligible for listing in the California Register because of the many high-profile trials that took place there and the central role it played in several notable protests led by community activists in San Francisco during the 1960s, 1970s, 1980s, and 1990s. This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.

Digging a pedestrian tunnel to transport prisoners would require approximately 18,000 cubic yards of soil to be removed from the project site and would have significant archeological impact in an area known to contain archeological resources from the "prehistoric period and Gold Rush Period to later 19th Century." Planners are also "concerned" about vibration levels during construction that could significantly damage more local archaeological resources.

If any evidence of Native American burials are found, there is a 6 day window to figure out what to do with the remains, and the planners would be forced to delay excavation for up to four weeks. The planners have deemed this aspect of their project "less
Filtration can provide people in jail with decent air quality, but how about during outdoor time? Having "outdoor" yards right next to a freeway is potentially quite dangerous; in the proposed design, the yards face the freeway. The design of the semi-enclosed yards may actually concentrate freeway pollution. They did not study this.

Email: nanmc@jimstevens.com  
Comment: Dear San Francisco Board of Supervisors, San Francisco Planning Department, and Sheriff Mirkarimi,  
My greatest concern regarding the need for a full EIR has to do with the location of the outdoor space for inmates being directly opposite a major freeway that is often bogged down with traffic. Cars idle and their exhaust spews in the direction of this outdoor space. Inmates have precious little time to spend out doors and it is vital to maintaining their mental and physical health. The design of the semi enclosed yards may actually concentrate freeway pollution.

Nan Mcguire

Dear San Francisco Board of Supervisors, San Francisco Planning Department, and Sheriff Mirkarimi,

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.

According to the California Register of Historical Resources, the Hall of Justice is eligible for listing in the California Register because of the many high-profile trials that took place there and the central role it played in several notable protests led by community activists in San Francisco during the 1960s, 1970s, 1980s, and 1990s. This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.

Digging a pedestrian tunnel to transport prisoners would require approximately 18,000 cubic yards of soil to be removed from the project site and would have significant archeological impact in an area known to contain archeological resources from the "prehistoric period and Gold Rush Period to later 19th Century." Planners are also "concerned" about vibration levels during construction that could significantly damage more local archaeological resources.

If any evidence of Native American burials are found, there is a 6 day window to figure out what to do with the remains, and the planners would be forced to delay excavation for up to four weeks. The planners have deemed this aspect of their project "less
than significant."

Filtration can provide people in jail with decent air quality, but how about during outdoor time? Having "outdoor" yards right next to a freeway is potentially quite dangerous; in the proposed design, the yards face the freeway. The design of the semi-enclosed yards may actually concentrate freeway pollution. They did not study this. The wind analysis may have used the wrong height, 95 instead of 110, and did not include the future plan to demolish the Hall of Justice (HOJ).

There is a great deal that the planners did not plan for in this preliminary report.

For these reasons and many more, the project should be further studied and the Preliminary Mitigated Negative Declaration should not be approved. A new jail will not only be terrible for the environment, but will be terrible for San Francisco and its residents.

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.

According to the California Register of Historical Resources, the Hall of Justice is eligible for listing in the California Register because of the many high-profile trials that took place there and the central role it played in several notable protests led by community activists in San Francisco during the 1960s, 1970s, 1980s, and 1990s. This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.

Digging a pedestrian tunnel to transport prisoners would require approximately 18,000 cubic yards of soil to be removed from the project site and would have significant archeological impact in an area known to contain archeological resources from the "prehistoric period and Gold Rush Period to later 19th Century." Planners are also "concerned" about vibration levels during construction that could significantly damage more local archaeological resources.

If any evidence of Native American burials are found, there is a 6 day window to figure out what to do with the remains, and the
planners would be forced to delay excavation for up to four weeks. The planners have deemed this aspect of their project "less than significant."

Filtration can provide people in jail with decent air quality, but how about during outdoor time? Having "outdoor" yards right next to a freeway is potentially quite dangerous; in the proposed design, the yards face the freeway. The design of the semi-enclosed yards may actually concentrate freeway pollution. They did not study this.
The wind analysis may have used the wrong height, 95 instead of 110, and did not include the future plan to demolish the Hall of Justice (HOJ).

There is a great deal that the planners did not plan for in this preliminary report.

For these reasons and many more, the project should be further studied and the Preliminary Mitigated Negative Declaration should not be approved. A new jail will not only be terrible for the environment, but will be terrible for San Francisco and its residents.

This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.

Digging a pedestrian tunnel to transport prisoners would require approximately 18,000 cubic yards of soil to be removed from the project site and would have significant archeological impact in an area known to contain archeological resources from the "prehistoric period and Gold Rush Period to later 19th Century." Planners are also "concerned" about vibration levels during construction that could significantly damage more local archaeological resources.

If any evidence of Native American burials are found, there is a 6 day window to figure out what to do with the remains, and the
planners would be forced to delay excavation for up to four weeks. The planners have deemed this aspect of their project "less than significant."

Filtration can provide people in jail with decent air quality, but how about during outdoor time? Having "outdoor" yards right next to a freeway is potentially quite dangerous; in the proposed design, the yards face the freeway. The design of the semi-enclosed yards may actually concentrate freeway pollution. They did not study this. The wind analysis may have used the wrong height, 95 instead of 110, and did not include the future plan to demolish the Hall of Justice (HOJ).

There is a great deal that the planners did not plan for in this preliminary report.

For these reasons and many more, the project should be further studied and the Preliminary Mitigated Negative Declaration should not be approved. A new jail will not only be terrible for the environment, but will be terrible for San Francisco and its residents.

Dear San Francisco Board of Supervisors, San Francisco Planning Department, and Sheriff Mirkarimi,

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.

According to the California Register of Historical Resources, the Hall of Justice is eligible for listing in the California Register because of the many high-profile trials that took place there and the central role it played in several notable protests led by community activists in San Francisco during the 1960s, 1970s, 1980s, and 1990s. This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.

According to the California Register of Historical Resources, the Hall of Justice is eligible for listing in the California Register because of the many high-profile trials that took place there and the central role it played in several notable protests led by community activists in San Francisco during the 1960s, 1970s, 1980s, and 1990s. This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.

Digging a pedestrian tunnel to transport prisoners would require approximately 18,000 cubic yards of soil to be removed from the project site and would have significant archeological impact in an area known to contain archeological resources from the "prehistoric period and Gold Rush Period to later 19th Century." Planners are also "concerned" about vibration levels during construction that could significantly damage more local archaeological resources.

If any evidence of Native American burials are found, there is a 6 day window to figure out what to do with the remains, and the
planners would be forced to delay excavation for up to four weeks. The planners have deemed this aspect of their project "less than significant."

Filtration can provide people in jail with decent air quality, but how about during outdoor time? Having "outdoor" yards right next to a freeway is potentially quite dangerous; in the proposed design, the yards face the freeway. The design of the semi-enclosed yards may actually concentrate freeway pollution. They did not study this.

The wind analysis may have used the wrong height, 95 instead of 110, and did not include the future plan to demolish the Hall of Justice (HOJ).

There is a great deal that the planners did not plan for in this preliminary report.

For these reasons and many more, the project should be further studied and the Preliminary Mitigated Negative Declaration should not be approved. A new jail will not only be terrible for the environment, but will be terrible for San Francisco and its residents.

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

I've read this document carefully and it contains a public comment that expresses concern about the proposed RDF project in San Francisco. The comment raises several points:

1. The project is not mitigated as claimed. It will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster. There are no plans to reduce traffic or construction worker/resident transportation.

2. The project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

3. The mezzanine level mentioned in the report is not shown in the plans, and the comment suggests that this is a way to warehouse more than the projected 640 beds.

4. This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

5. The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

6. The planners have no alternative to support or subsidize "employment center" projects that have an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

7. The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

8. The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.

Public comment on RDF mitigated negative declaration

June 2, 2015 1:52 PM

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.

Comment: Dear San Francisco Board of Supervisors, San Francisco Planning Department, and Sheriff Mirkarimi,

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.

According to the California Register of Historical Resources, the Hall of Justice is eligible for listing in the California Register because of the many high-profile trials that took place there and the central role it played in several notable protests led by community activists in San Francisco during the 1960s, 1970s, 1980s, and 1990s. This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.

planners would be forced to delay excavation for up to four weeks. The planners have deemed this aspect of their project "less than significant."

Filtration can provide people in jail with decent air quality, but how about during outdoor time? Having "outdoor" yards right next to a freeway is potentially quite dangerous; in the proposed design, the yards face the freeway. The design of the semi-enclosed yards may actually concentrate freeway pollution. They did not study this. The wind analysis may have used the wrong height, 95 instead of 110, and did not include the future plan to demolish the Hall of Justice (HOJ).

There is a great deal that the planners did not plan for in this preliminary report. For these reasons and many more, the project should be further studied and the Preliminary Mitigated Negative Declaration should not be approved. A new jail will not only be terrible for the environment, but will be terrible for San Francisco and its residents.

Comment: Dear San Francisco Board of Supervisors, San Francisco Planning Department, and Sheriff Mirkarimi,

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.

According to the California Register of Historical Resources, the Hall of Justice is eligible for listing in the California Register because of the many high-profile trials that took place there and the central role it played in several notable protests led by community activists in San Francisco during the 1960s, 1970s, 1980s, and 1990s. This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.

Digging a pedestrian tunnel to transport prisoners would require approximately 18,000 cubic yards of soil to be removed from the project site and would have significant archaelogical impact in an area known to contain archeological resources from the "prehistoric period and Gold Rush Period to later 19th Century." Planners are also "concerned" about vibration levels during construction that could significantly damage more local archaeological resources.

If any evidence of Native American burials are found, there is a 6 day window to figure out what to do with the remains, and the
planners would be forced to delay excavation for up to four weeks. The planners have deemed this aspect of their project “less than significant.”

Filtration can provide people in jail with decent air quality, but how about during outdoor time? Having "outdoor" yards right next to a freeway is potentially quite dangerous; in the proposed design, the yards face the freeway. The design of the semi-enclosed yards may actually concentrate freeway pollution. They did not study this.

The wind analysis may have used the wrong height, 95 instead of 110, and did not include the future plan to demolish the Hall of Justice (HOJ).

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification. This very fact of effectively throwing poorer people onto the streets is itself a way to necessitate more prisons, if these are merely business facilitators, or, if prisons are supposed to be rehabilitative, is therefore counterproductive. On either count, this project is utterly antisocial.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever. Here again the project opposes civic well-being.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. I am totally opposed to building a space that will allow more people to be jailed in SF. If a retrofit is due, that's one thing, but additional jail space is not acceptable! I came to the townhall on 6th street a few months ago and was not convinced in any way that it was a good idea. Furthermore, I also don't support the hiring of hundreds of more police officers in SF. And I'm certainly not alone on these two issues.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.

According to the California Register of Historical Resources, the Hall of Justice is eligible for listing in the California Register because of the many high-profile trials that took place there and the central role it played in several notable protests led by community activists in San Francisco during the 1960s, 1970s, 1980s, and 1990s. This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.

Digging a pedestrian tunnel to transport prisoners would require approximately 18,000 cubic yards of soil to be removed from the project site and would have significant archeological impact in an area known to contain archeological resources from the "prehistoric period and Gold Rush Period to later 19th Century." Planners are also concerned about vibration levels during construction that could significantly damage more local archaeological resources.

If any evidence of Native American burials are found, there is a 6 day window to figure out what to do with the remains, and the
planners would be forced to delay excavation for up to four weeks. The planners have deemed this aspect of their project "less than significant."

Filtration can provide people in jail with decent air quality, but how about during outdoor time? Having "outdoor" yards right next to a freeway is potentially quite dangerous; in the proposed design, the yards face the freeway. The design of the semi-enclosed yards may actually concentrate freeway pollution. They did not study this. The wind analysis may have used the wrong height, 95 instead of 110, and did not include the future plan to demolish the Hall of Justice (HOJ).

There is a great deal that the planners did not plan for in this preliminary report.

For these reasons and many more, the project should be further studied and the Preliminary Mitigated Negative Declaration should not be approved. A new jail will not only be terrible for the environment, but will be terrible for San Francisco and its residents.

As a long time resident of San Francisco -- I've been here since 1963 -- I have watched this beautiful city get destroyed by gentrification and the cut back on all human services for low income people and people of color. The absolutely LAST thing we need in this city is a jail. We need affordable housing, high quality education, top notch medical and mental health care, after school programs for youth, and ways to bring families together. A jail provides exactly the opposite. I'm a voter, and I can promise you all I would never under any situation vote for or support and public officials that want to waste San Francisco's precious resources building a jail. And as a planning department, haven't you thrown enough low income Black and Brown people out of the city? No more. No jail.

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. Having "outdoor" yards right next to a freeway is potentially quite dangerous; in the proposed design, the yards face the freeway. The design of the semi-enclosed yards may actually concentrate freeway pollution. They did not study this.

The wind analysis may have used the wrong height, 95 instead of 110, and did not include the future plan to demolish the Hall of Justice (HOJ).

There is a great deal that the planners did not plan for in this preliminary report.

For these reasons and many more, the project should be further studied and the Preliminary Mitigated Negative Declaration should not be approved. A new jail will not only be terrible for the environment, but will be terrible for San Francisco and its residents.

Comment: Dear San Francisco Board of Supervisors, San Francisco Planning Department, and Sheriff Mirkarimi,

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.

According to the California Register of Historical Resources, the Hall of Justice is eligible for listing in the California Register because of the many high-profile trials that took place there and the central role it played in several notable protests led by community activists in San Francisco during the 1960s, 1970s, 1980s, and 1990s. This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.

Digging a pedestrian tunnel to transport prisoners would require approximately 18,000 cubic yards of soil to be removed from the project site and would have significant archeological impact in an area known to contain archeological resources from the "prehistoric period and Gold Rush Period to later 19th Century." Planners are also "concerned" about vibration levels during construction that could significantly damage more local archaeological resources.

If any evidence of Native American burials are found, there is a 6 day window to figure out what to do with the remains, and the
planners would be forced to delay excavation for up to four weeks. The planners have deemed this aspect of their project "less than significant."

Filtration can provide people in jail with decent air quality, but how about during outdoor time? Having "outdoor" yards right next to a freeway is potentially quite dangerous; in the proposed design, the yards face the freeway. The design of the semi-enclosed yards may actually concentrate freeway pollution. They did not study this.

Comment: Dear San Francisco Board of Supervisors, San Francisco Planning Department, and Sheriff Mirkarimi,
We don't need a new jail. It will displace residents, disturb parking and traffic. It is time to do more than imprison people in this country.

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.

According to the California Register of Historical Resources, the Hall of Justice is eligible for listing in the California Register because of the many high-profile trials that took place there and the central role it played in several notable protests led by community activists in San Francisco during the 1960s, 1970s, 1980s, and 1990s. This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.

Digging a pedestrian tunnel to transport prisoners would require approximately 18,000 cubic yards of soil to be removed from the project site and would have significant archeological impact in an area known to contain archeological resources from the "prehistoric period and Gold Rush Period to later 19th Century." Planners are also "concerned" about vibration levels during construction that could significantly damage more local archaeological resources.

If any evidence of Native American burials are found, there is a 6 day window to figure out what to do with the remains, and the
planners would be forced to delay excavation for up to four weeks. The planners have deemed this aspect of their project "less than significant."

Filtration can provide people in jail with decent air quality, but how about during outdoor time? Having "outdoor" yards right next to a freeway is potentially quite dangerous; in the proposed design, the yards face the freeway. The design of the semi-enclosed yards may actually concentrate freeway pollution. They did not study this.

The wind analysis may have used the wrong height, 95 instead of 110, and did not include the future plan to demolish the Hall of Justice (HOJ).

There is a great deal that the planners did not plan for in this preliminary report.

For these reasons and many more, the project should be further studied and the Preliminary Mitigated Negative Declaration should not be approved. A new jail will not only be terrible for the environment, but will be terrible for San Francisco and its residents.

Comment: Dear San Francisco Board of Supervisors, San Francisco Planning Department, and Sheriff Mirkarimi,

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

Comment: Dear San Francisco Board of Supervisors, San Francisco Planning Department, and Sheriff Mirkarimi,

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.

According to the California Register of Historical Resources, the Hall of Justice is eligible for listing in the California Register because of the many high-profile trials that took place there and the central role it played in several notable protests led by community activists in San Francisco during the 1960s, 1970s, 1980s, and 1990s. This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.

Digging a pedestrian tunnel to transport prisoners would require approximately 18,000 cubic yards of soil to be removed from the project site and would have significant archeological impact in an area known to contain archeological resources from the "prehistoric period and Gold Rush Period to later 19th Century." Planners are also "concerned" about vibration levels during construction that could significantly damage more local archaeological resources.

If any evidence of Native American burials are found, there is a 6 day window to figure out what to do with the remains, and the
planners would be forced to delay excavation for up to four weeks. The planners have deemed this aspect of their project "less than significant."

Filtration can provide people in jail with decent air quality, but how about during outdoor time? Having "outdoor" yards right next to a freeway is potentially quite dangerous; in the proposed design, the yards face the freeway. The design of the semi-enclosed yards may actually concentrate freeway pollution. They did not study this. The wind analysis may have used the wrong height, 95 instead of 110, and did not include the future plan to demolish the Hall of Justice (HOJ).

There is a great deal that the planners did not plan for in this preliminary report.

For these reasons and many more, the project should be further studied and the Preliminary Mitigated Negative Declaration should not be approved. A new jail will not only be terrible for the environment, but will be terrible for San Francisco and its residents.

It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.

Digging a pedestrian tunnel to transport prisoners would require approximately 18,000 cubic yards of soil to be removed from the project site and would have significant archeological impact in an area known to contain archeological resources from the "prehistoric period and Gold Rush Period to later 19th Century." Planners are also "concerned" about vibration levels during construction that could significantly damage more local archaeological resources.

If any evidence of Native American burials are found, there is a 6 day window to figure out what to do with the remains, and the
planners would be forced to delay excavation for up to four weeks. The planners have deemed this aspect of their project "less than significant."

Filtration can provide people in jail with decent air quality, but how about during outdoor time? Having "outdoor" yards right next to a freeway is potentially quite dangerous; in the proposed design, the yards face the freeway. The design of the semi-enclosed yards may actually concentrate freeway pollution. They did not study this.
The wind analysis may have used the wrong height, 95 instead of 110, and did not include the future plan to demolish the Hall of Justice (HOJ).

There is a great deal that the planners did not plan for in this preliminary report.

For these reasons and many more, the project should be further studied and the Preliminary Mitigated Negative Declaration should not be approved. A new jail will not only be terrible for the environment, but will be terrible for San Francisco and its residents.

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.

According to the California Register of Historical Resources, the Hall of Justice is eligible for listing in the California Register because of the many high-profile trials that took place there and the central role it played in several notable protests led by community activists in San Francisco during the 1960s, 1970s, 1980s, and 1990s. This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.

Comment: Dear San Francisco Board of Supervisors, San Francisco Planning Department, and Sheriff Mirkarimi,

It's time to move from punitive measures (that have proved never to work) to restorative justice. It saves money and lives. The psychologically challenged and those with drug addictions need to be helped not incarcerated, just as the poor and the hungry, the abused and the nonviolent who have caused harm. We need inter agency connections within local governments always on call so that the arresting police officers can make appropriate choices as to where to send the person who has caused harm. Start restorative practices in grade school so that we can stop the violence at its root causes!

We need to institute education in restorative practices as part of the school teacher education curriculum and in the Police Academies. It works!

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

I am gravely concerned about the proposed detention facility and stand in strong opposition to its construction. Scientific research has shown time and time again that detention is not the answer to health and happy communities. Home to some of the worst state violence, jails are actually sites of deep trauma and harm. With a criminal justice system rife with racial discrimination, this latest jail plan is sure to be the latest offender in the ongoing human rights crisis that is mass incarceration. I stand with thousands in urging you to oppose jail construction.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.

According to the California Register of Historical Resources, the Hall of Justice is eligible for listing in the California Register because of the many high-profile trials that took place there and the central role it played in several notable protests led by community activists in San Francisco during the 1960s, 1970s, 1980s, and 1990s. This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.

Digging a pedestrian tunnel to transport prisoners would require approximately 18,000 cubic yards of soil to be removed from the project site and would have significant archeological impact in an area known to contain archeological resources from the "prehistoric period and Gold Rush Period to later 19th Century." Planners are also "concerned" about vibration levels during construction that could significantly damage more local archaeological resources.

If any evidence of Native American burials are found, there is a 6 day window to figure out what to do with the remains, and the
planners would be forced to delay excavation for up to four weeks. The planners have deemed this aspect of their project "less than significant."

Filtration can provide people in jail with decent air quality, but how about during outdoor time? Having "outdoor" yards right next to a freeway is potentially quite dangerous; in the proposed design, the yards face the freeway. The design of the semi-enclosed yards may actually concentrate freeway pollution. They did not study this. The wind analysis may have used the wrong height, 95 instead of 110, and did not include the future plan to demolish the Hall of Justice (HOJ).

There is a great deal that the planners did not plan for in this preliminary report.

For these reasons and many more, the project should be further studied and the Preliminary Mitigated Negative Declaration should not be approved. A new jail will not only be terrible for the environment, but will be terrible for San Francisco and its residents.

Comment: Dear San Francisco Board of Supervisors, San Francisco Planning Department, and Sheriff Mirkarimi,

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

Comment: Dear San Francisco Board of Supervisors, San Francisco Planning Department, and Sheriff Mirkarimi,

I am greatly concerned about the impact, environmental and human, of the proposed new jail. I work with seniors and people with disabilities in SOMA and see the destructive effects of gentrification in this neighborhood. So many long-time residents have been displaced, especially elders from the Filipino community. Any loss of housing for low-income people, even one SRO like the 480-484 Sixth St. building, has a negative effect in a city where it's next to impossible to find a place to live if you're poor.  
On a human level, I can't believe that money spent on a new jail is more important than funding social services that both support people who are struggling to survive and prevent cycles of poverty and marginalization.  
I urge you to abandon the idea of a new jail and redirect that money to increasing community resources.  

Sincerely,  
Donna Willmott, MPH

Digging a pedestrian tunnel to transport prisoners would require approximately 18,000 cubic yards of soil to be removed from the project site and would have significant archeological impact in an area known to contain archeological resources from the "prehistoric period and Gold Rush Period to later 19th Century." Planners are also "concerned" about vibration levels during construction that could significantly damage more local archaeological resources.
If any evidence of Native American burials are found, there is a 6 day window to figure out what to do with the remains, and the planners would be forced to delay excavation for up to four weeks. The planners have deemed this aspect of their project “less than significant.”

Filtration can provide people in jail with decent air quality, but how about during outdoor time? Having "outdoor" yards right next to a freeway is potentially quite dangerous; in the proposed design, the yards face the freeway. The design of the semi-enclosed yards may actually concentrate freeway pollution. They did not study this. The wind analysis may have used the wrong height, 95 instead of 110, and did not include the future plan to demolish the Hall of Justice (HOJ).

There is a great deal that the planners did not plan for in this preliminary report.

For these reasons and many more, the project should be further studied and the Preliminary Mitigated Negative Declaration should not be approved. A new jail will not only be terrible for the environment, but will be terrible for San Francisco and its residents.

Public comment on RDF mitigated negative declaration

Name: Giulio Sarro  
Email: giulio415@gmail.com  
Comment: Dear San Francisco Board of Supervisors, San Francisco Planning Department, and Sheriff Mirkarimi,

You know my family. We come from a long line of SF natives who have been on the frontline of progressive causes that you have dearly also fought for. Im sure there are real reasons for wanting to construct this new prison, but the the bottom line is this: school vs prisons, education not incarceration. Housing not jails, last we all know that prisons will be filled with Black and Brown people, and police will justify new ways of filling up this prison and keeping their jobs.

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.

According to the California Register of Historical Resources, the Hall of Justice is eligible for listing in the California Register because of the many high-profile trials that took place there and the central role it played in several notable protests led by community activists in San Francisco during the 1960s, 1970s, 1980s, and 1990s. This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.

According to the California Register of Historical Resources, the Hall of Justice is eligible for listing in the California Register because of the many high-profile trials that took place there and the central role it played in several notable protests led by community activists in San Francisco during the 1960s, 1970s, 1980s, and 1990s. This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.

Digging a pedestrian tunnel to transport prisoners would require approximately 18,000 cubic yards of soil to be removed from the project site and would have significant archeological impact in an area known to contain archeological resources from the "prehistoric period and Gold Rush Period to later 19th Century." Planners are also “concerned” about vibration levels during construction that could significantly damage more local archaeological resources.

If any evidence of Native American burials are found, there is a 6 day window to figure out what to do with the remains, and the
planners would be forced to delay excavation for up to four weeks. The planners have deemed this aspect of their project "less than significant."

Filtration can provide people in jail with decent air quality, but how about during outdoor time? Having "outdoor" yards right next to a freeway is potentially quite dangerous; in the proposed design, the yards face the freeway. The design of the semi-enclosed yards may actually concentrate freeway pollution. They did not study this. The wind analysis may have used the wrong height, 95 instead of 110, and did not include the future plan to demolish the Hall of Justice (HOJ).

There is a great deal that the planners did not plan for in this preliminary report.

For these reasons and many more, the project should be further studied and the Preliminary Mitigated Negative Declaration should not be approved. A new jail will not only be terrible for the environment, but will be terrible for San Francisco and its residents.

Sincerely,
May Tulin

Comment: Dear San Francisco Board of Supervisors, San Francisco Planning Department, and Sheriff Mirkarimi,

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an “employment center” project that has an exemption. Comment: Dear San Francisco Board of Supervisors, San Francisco Planning Department, and Sheriff Mirkarimi, let's be realistic, many people don’t like being stopped by the police for whatever reasons. In the wake of mounting police murders of innocent Black, Brown, and White peoples, more police presence is not the solution to this city's problems. We need housing, not housing in jails. We need to keep the people at 480-484 Sixth street dwelling in their SROs. More jails are going to be more incarcerations. I voted for Ross Mirkarimi because he wanted to end the rescivation (returning to jail of inmates). The proposal to build more jails seems completely contradictory to the reason why I voted for Mirkarimi. We need to demilitarize the police, not grow the police. Please stop the building of more jails. We need homes, not jails.

Yolanda Catzalco

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

Filtration can provide people in jail with decent air quality, but how about during outdoor time? Having "outdoor" yards right next to a freeway is potentially quite dangerous; in the proposed design, the yards face the freeway. The design of the semi-enclosed yards may actually concentrate freeway pollution. They did not study this. The wind analysis may have used the wrong height, 95 instead of 110, and did not include the future plan to demolish the Hall of Justice (HOJ).

There is a great deal that the planners did not plan for in this preliminary report.

For these reasons and many more, the project should be further studied and the Preliminary Mitigated Negative Declaration should not be approved. A new jail will not only be terrible for the environment, but will be terrible for San Francisco and its residents.

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.

According to the California Register of Historical Resources, the Hall of Justice is eligible for listing in the California Register because of the many high-profile trials that took place there and the central role it played in several notable protests led by community activists in San Francisco during the 1960s, 1970s, 1980s, and 1990s. This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.

Digging a pedestrian tunnel to transport prisoners would require approximately 18,000 cubic yards of soil to be removed from the project site and would have significant archeological impact in an area known to contain archeological resources from the "prehistoric period and Gold Rush Period to later 19th Century." Planners are also "concerned" about vibration levels during construction that could significantly damage more local archaeological resources.

If any evidence of Native American burials are found, there is a 6 day window to figure out what to do with the remains, and the
planners would be forced to delay excavation for up to four weeks. The planners have deemed this aspect of their project “less than significant.”

Filtration can provide people in jail with decent air quality, but how about during outdoor time? Comment: Dear San Francisco Board of Supervisors, San Francisco Planning Department, and Sheriff Mirkarimi,

The new jail would be environmentally disruptive as well as a financially nonsensical and socially awful. Tearing down low-income housing SROs to build unneeded jail cells with money the city doesn't have; what could be more destructive than that? The increased traffic and pollution are simply icing on a rotten cake. WHY do we need a new jail when the current one is half-empty? I support Sheriff Mirkarimi’s efforts to lower our jail population, but can’t see how a new jail fits that plan.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.

According to the California Register of Historical Resources, the Hall of Justice is eligible for listing in the California Register because of the many high-profile trials that took place there and the central role it played in several notable protests led by community activists in San Francisco during the 1960s, 1970s, 1980s, and 1990s. This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.

Digging a pedestrian tunnel to transport prisoners would require approximately 18,000 cubic yards of soil to be removed from the project site and would have significant archeological impact in an area known to contain archeological resources from the "prehistoric period and Gold Rush Period to later 19th Century." Planners are also "concerned" about vibration levels during construction that could significantly damage more local archeological resources.

If any evidence of Native American burials are found, there is a 6 day window to figure out what to do with the remains, and the
planners would be forced to delay excavation for up to four weeks. The planners have deemed this aspect of their project "less than significant."

Filtration can provide people in jail with decent air quality, but how about during outdoor time? Having "outdoor" yards right next to a freeway is potentially quite dangerous; in the proposed design, the yards face the freeway. The design of the semi-enclosed yards may actually concentrate freeway pollution. They did not study this. The wind analysis may have used the wrong height, 95 instead of 110, and did not include the future plan to demolish the Hall of Justice (HOJ).

There is a great deal that the planners did not plan for in this preliminary report.

For these reasons and many more, the project should be further studied and the Preliminary Mitigated Negative Declaration should not be approved. A new jail will not only be terrible for the environment, but will be terrible for San Francisco and its residents.

Our city doesn't need a new jail, and this project will harm our community and reduce needed resources.

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. The wind analysis may have used the wrong height, 95 instead of 110, and did not include the future plan to demolish the Hall of Justice (HOJ).

There is a great deal that the planners did not plan for in this preliminary report.

For these reasons and many more, the project should be further studied and the Preliminary Mitigated Negative Declaration should not be approved. A new jail will not only be terrible for the environment, but will be terrible for San Francisco and its residents.

Dear San Francisco Board of Supervisors, San Francisco Planning Department, and Sheriff Mirkarimi,

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.

According to the California Register of Historical Resources, the Hall of Justice is eligible for listing in the California Register because of the many high-profile trials that took place there and the central role it played in several notable protests led by community activists in San Francisco during the 1960s, 1970s, 1980s, and 1990s. This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.

Digging a pedestrian tunnel to transport prisoners would require approximately 18,000 cubic yards of soil to be removed from the project site and would have significant archeological impact in an area known to contain archeological resources from the "prehistoric period and Gold Rush Period to later 19th Century." Planners are also "concerned" about vibration levels during construction that could significantly damage more local archaeological resources.

If any evidence of Native American burials are found, there is a 6 day window to figure out what to do with the remains, and the
planners would be forced to delay excavation for up to four weeks. The planners have deemed this aspect of their project "less than significant."

Filtration can provide people in jail with decent air quality, but how about during outdoor time? Having "outdoor" yards right next to a freeway is potentially quite dangerous; in the proposed design, the yards face the freeway. The design of the semi-enclosed yards may actually concentrate freeway pollution. They did not study this.

The wind analysis may have used the wrong height, 95 instead of 110, and did not include the future plan to demolish the Hall of Justice (HOJ).

There is a great deal that the planners did not plan for in this preliminary report.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.

According to the California Register of Historical Resources, the Hall of Justice is eligible for listing in the California Register because of the many high-profile trials that took place there and the central role it played in several notable protests led by community activists in San Francisco during the 1960s, 1970s, 1980s, and 1990s. This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.

Digging a pedestrian tunnel to transport prisoners would require approximately 18,000 cubic yards of soil to be removed from the project site and would have significant archeological impact in an area known to contain archeological resources from the "prehistoric period and Gold Rush Period to later 19th Century." Planners are also "concerned" about vibration levels during construction that could significantly damage more local archaeological resources.

If any evidence of Native American burials are found, there is a 6 day window to figure out what to do with the remains, and the
planners would be forced to delay excavation for up to four weeks. The planners have deemed this aspect of their project "less than significant."

Filtration can provide people in jail with decent air quality, but how about during outdoor time? Having "outdoor" yards right next to a freeway is potentially quite dangerous; in the proposed design, the yards face the freeway. The design of the semi-enclosed yards may actually concentrate freeway pollution. They did not study this. The wind analysis may have used the wrong height, 95 instead of 110, and did not include the future plan to demolish the Hall of Justice (HOJ).

There is a great deal that the planners did not plan for in this preliminary report.

For these reasons and many more, the project should be further studied and the Preliminary Mitigated Negative Declaration should not be approved. A new jail will not only be terrible for the environment, but will be terrible for San Francisco and its residents.

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.

Comment: Dear San Francisco Board of Supervisors, San Francisco Planning Department, and Sheriff Mirkarimi,

On page 136 of the CEQA statutes it states under Mandatory Findings of Significance that a project must declare if, “The environmental effects of a project will cause substantial adverse effects on human beings, either directly or indirectly.”

The World Health Organization defines environmental health as addressing, “all the physical, chemical, and biological factors external to a person, and all the related factors impacting behaviors.” Freeways or polluting factories are obvious forms of pathogenic infrastructure, that is they are physical factors, which cause adverse effects on human beings. Within public health there is a large body of evidence that argues that jails and prisons are types of pathogenic infrastructure that have adverse effects on humans. Jails are physical factors that alter the environment in which San Franciscans live, just as parks increase availability of open space and places to play. They prevent access to services, disrupt ability to work and have “contagion” effects in communities that are disproportionately represented in jails. In San Francisco many of these populations experience high levels of mental health conditions, chronic illness and substance abuse issues. A November 24, 2014 NY Times Op-Ed pulled from a recent report by the Vera Institute of Justice to argue that mass incarceration poses, “one of the greatest public health challenges of modern times.” Jail exacerbates these health concerns, increasing rates of STDs, severity of substance abuse disorders and exposure to violence. The Vera report found nationwide, for example, that suicide accounts for one-third of deaths in jails, and that while 68% of jailed individuals have diagnosable substance abuse disorders, less than 15% receive appropriate treatment. Higher rates of health conditions increase the use of city services, medications, and emergency services such as fire and police and decrease healthy behaviors that have environmental co-benefits such as biking or eating healthy foods.

Under CEQA, it is required that the building of a new jail, as pathogenic infrastructure, must submit additional findings on the adverse effects on human beings that it causes through its environmental effects.
Comment: Hahahahahahaha, this politics related YouTube video is really so comical, I loved it. Thanks in favor of sharing this.
This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.

According to the California Register of Historical Resources, the Hall of Justice is eligible for listing in the California Register because of the many high-profile trials that took place there and the central role it played in several notable protests led by community activists in San Francisco during the 1960s, 1970s, 1980s, and 1990s. This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.

Digging a pedestrian tunnel to transport prisoners would require approximately 18,000 cubic yards of soil to be removed from the project site and would have significant archeological impact in an area known to contain archeological resources from the "prehistoric period and Gold Rush Period to later 19th Century." Planners are also "concerned" about vibration levels during construction that could significantly damage more local archaeological resources.

If any evidence of Native American burials are found, there is a 6 day window to figure out what to do with the remains, and the
planners would be forced to delay excavation for up to four weeks. The planners have deemed this aspect of their project “less than significant.”

Filtration can provide people in jail with decent air quality, but how about during outdoor time? Having "outdoor" yards right next to a freeway is potentially quite dangerous; in the proposed design, the yards face the freeway. The design of the semi-enclosed yards may actually concentrate freeway pollution. They did not study this.
The wind analysis may have used the wrong height, 95 instead of 110, and did not include the future plan to demolish the Hall of Justice (HOJ).

There is a great deal that the planners did not plan for in this preliminary report.

For these reasons and many more, the project should be further studied and the Preliminary Mitigated Negative Declaration should not be approved. A new jail will not only be terrible for the environment, but will be terrible for San Francisco and its residents.

Comment: Dear San Francisco Board of Supervisors, San Francisco Planning Department, and Sheriff Mirkarimi,  

I am strongly opposed to new jail construction. We need to invest in education, affordable housing and real economic opportunities. We cannot continue to jail vast numbers of our population.  

Thank you  

This email serves as public comment for the Preliminary Mitigated Negative Declaration issued May 13, 2015 for the 850 Bryant Street Hall of Justice Rehabilitation and Detention Facility Project.  

The proposed project not only could displace the individuals and families living in the 14 SRO units of the historic building at 480-484 Sixth Street but could also serve to undermine the provisions of Annual Limit Program and the Accountable Planning Initiative (Proposition M) by increasing office space, decreasing affordable housing for our most marginalized residents, and encouraging gentrification.  

This project will take away space currently used by well-established businesses in the community. Older businesses struggle to find affordable rental space in SoMA in this market; we will lose them forever.  

The mezzanine level mentioned in the report is not shown in the plans, and we suspect that this is a way to warehouse more than the projected 640 beds.  

Victoria Manalo Draves Park is a brand new, 2.5-acre park with a softball field, basketball court, dual-level playground, picnic area, community garden and large, grassy field in the SOMA neighborhood, next to Bessie Carmichael Elementary School and near Bessie Carmichael School/Filipino Education Center. The park is named for local diving champion Vicki Manalo Draves, the first Filipina-American to compete in the Olympic games. This project, in conjunction with other commercial development projects in the area, would cast shadows on both the northern and southeastern parts of the park. This conflicts with General Plan policies related to urban design and the preservation of sunlight on open spaces.  

The project planners claim to be exempt from parking analysis because they are an "employment center" project that has an exemption. However, it is clear that "employment center" projects are on commercial zoned parcels, and this site is not zoned C. So they are not exempt. They also state that they will remove 22 off-street and 41 on-street spaces, all of them in a neighborhood of high demand. This requires careful analysis. It also looks like they knew this but attempted to claim the "employment center" designation, since they address the two other criteria for CEQA exemption but not the zoning.  

The planners have no plan to address loss of parking spots in the community, no plans to support or subsidize alternative transportation for construction workers or residents impacted, no plans to reduce traffic or construction worker/resident congestion, and will instead waste a ton of money on surveys and hiring unnecessary city workers to monitor the disaster with no real plans for alleviating the stress and burden this will place on San Francisco.  

The rehabilitation of the San Bruno facility has been rejected because of exaggerated costs and false information regarding transportation of prisoners to and from the downtown courts.  

According to the California Register of Historical Resources, the Hall of Justice is eligible for listing in the California Register because of the many high-profile trials that took place there and the central role it played in several notable protests led by community activists in San Francisco during the 1960s, 1970s, 1980s, and 1990s. This area of the city is also home to the historic building at 480-484 Sixth Street, which is a three-story, 14-unit single room occupancy (SRO) residential building with retail on the ground floor, constructed in 1916. It is also near the property at 887-891 Bryant Street, built in 1920, which is an Art Deco style commercial building.  

Digging a pedestrian tunnel to transport prisoners would require approximately 18,000 cubic yards of soil to be removed from
the project site and would have significant archeological impact in an area known to contain archeological resources from the "prehistoric period and Gold Rush Period to later 19th Century." Planners are also "concerned" about vibration levels during construction that could significantly damage more local archaeological resources.

If any evidence of Native American burials are found, there is a 6 day window to figure out what to do with the remains, and the planners would be forced to delay excavation for up to four weeks. The planners have deemed this aspect of their project "less than significant."

Filtration can provide people in jail with decent air quality, but how about during outdoor time? Comment: Dear San Francisco Board of Supervisors, San Francisco Planning Department, and Sheriff Mirkarimi,

On page 136 of the CEQA statutes it states under Mandatory Findings of Significance that a project must declare if, "The environmental effects of a project will cause substantial adverse effects on human beings, either directly or indirectly."

The World Health Organization defines environmental health as addressing, "all the physical, chemical, and biological factors external to a person, and all the related factors impacting behaviors." Freeways or polluting factories are obvious forms of pathogenic infrastructure, that is they are physical factors, which cause adverse effects on human beings. Within public health there is a large body of evidence that argues that jails and prisons are types of pathogenic infrastructure that have adverse effects on humans. Jails are physical factors that alter the environment in which San Franciscans live, just as parks increase availability of open space and places to play. They prevent access to services, disrupt ability to work and have "contagion" effects in communities that are disproportionately represented in jails. In San Francisco many of these populations experience high levels of mental health conditions, chronic illness and substance abuse issues. A November 24, 2014 NY Times Op-Ed pulled from a recent report by the Vera Institute of Justice to argue that mass incarceration poses, "one of the greatest public health challenges of modern times." Jail exacerbates these health concerns, increasing rates of STDs, severity of substance abuse disorders and exposure to violence. The Vera report found nationwide, for example, that suicide accounts for one-third of deaths in jails, and that while 68% of jailed individuals have diagnosable substance abuse disorders, less than 15% receive appropriate treatment. Higher rates of health conditions increase the use of city services, medications, and emergency services such as fire and police and decrease healthy behaviors that have environmental co-benefits such as biking or eating healthy foods.

Under CEQA, it is required that the building of a new jail, as pathogenic infrastructure, must submit additional findings on the adverse effects on human beings that it causes through its environmental effects.

Comment: Dear San Francisco Board of Supervisors, San Francisco Planning Department, and Sheriff Mirkarimi,

On page 136 of the CEQA statutes it states under Mandatory Findings of Significance that a project must declare if, “The environmental effects of a project will cause substantial adverse effects on human beings, either directly or indirectly.”

The World Health Organization defines environmental health as addressing, “all the physical, chemical, and biological factors external to a person, and all the related factors impacting behaviors.” Freeways or polluting factories are obvious forms of pathogenic infrastructure, that is they are physical factors, which cause adverse effects on human beings. Within public health there is a large body of evidence that argues that jails and prisons are types of pathogenic infrastructure that have adverse effects on humans. Jails are physical factors that alter the environment in which San Franciscans live, just as parks increase availability of open space and places to play. They prevent access to services, disrupt ability to work and have “contagion” effects in communities that are disproportionately represented in jails. In San Francisco many of these populations experience high levels of mental health conditions, chronic illness and substance abuse issues. A November 24, 2014 NY Times Op-Ed pulled from a recent report by the Vera Institute of Justice to argue that mass incarceration poses, “one of the greatest public health challenges of modern times.” Jail exacerbates these health concerns, increasing rates of STDs, severity of substance abuse disorders and exposure to violence. The Vera report found nationwide, for example, that suicide accounts for one-third of deaths in jails, and that while 68% of jailed individuals have diagnosable substance abuse disorders, less than 15% receive appropriate treatment. Higher rates of health conditions increase the use of city services, medications, and emergency services such as fire and police and decrease healthy behaviors that have environmental co-benefits such as biking or eating healthy foods.

Under CEQA, it is required that the building of a new jail, as pathogenic infrastructure, must submit additional findings on the adverse effects on human beings that it causes through its environmental effects.
Resolution authorizing the Sheriff's Department to submit a funding application to the Board of State and Community Corrections pursuant to California State Senate Bill 863 (2014) for a proposed project to replace County Jail No. 3 and County Jail No. 4; outlining the cash contribution funds for the proposed project; conditionally approving the form and execution of associated financing and construction documents; and adopting a Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program.

WHEREAS, Under Senate Bill 863, Chapter 37, Statutes of 2015 ("SB 863"), the State of California authorized the Board of State and Community Corrections ("BSCC"), the California State Public Works Board ("SPWB"), and participating counties to acquire, design and construct adult local criminal justice facilities approved by the BSCC; and

WHEREAS, SB 863 authorized the SPWB to issue up to $500,000,000 in lease revenue bonds to finance the acquisition, design, renovate, and construction of approved adult local criminal justice facilities; and

WHEREAS, On June 10, 2015, the BSCC issued a Request for Proposals for Construction of Adult Local Criminal Justice Facilities ("SB 863 RFP"), a copy of which is on file with the Clerk of the Board of Supervisors in File No. 150701, and is incorporated herein by reference; and

WHEREAS, In 1992, the City and County of San Francisco ("County") developed Seismic Hazard Ratings for over 200 of its public buildings on a scale from one to four, with four representing the most seismically deficient, and County's Hall of Justice building at 850 Bryant Street ("HOJ") is a seismically deficient building that received a rating of three; and
WHEREAS, The HOJ contains County Jail No. 3 and County Jail No. 4, which have a combined total of 905 (826 rated) bed facilities; and

WHEREAS, If the HOJ sustains significant damage due to a major seismic event, the estimated cost to relocate and transport inmates housed in County Jail No. 3 and County Jail No. 4 is estimated to be tens of millions of dollars, and replacing County Jail No. 3 and County Jail No. 4 has been a high priority of the County’s Ten-Year Capital Plan since its inception in 2006; and

WHEREAS, This Board of Supervisors adopted a FYs 2014-2023 Ten-Year Capital Plan on April 21, 2015, showing that the County could fully fund a replacement jail facility in an amount equal to $278,000,000 with General Fund supported certificates of participation; and

WHEREAS, The replacement of County Jail No. 3 and County Jail No. 4 with a new jail facility adjacent to HOJ (the “Proposed Facility”) is currently estimated to cost $240,000,000, and if the County receives financing of SB 863 funds for the Proposed Facility, the total cost to the County to construct the Proposed Facility would be substantially offset by such awarded funds; and

WHEREAS, Applying for the SB 863 funds requires the County to submit an Applicant’s Agreement in substantially the form on file with the Clerk of the Board of Supervisors in File No. 150701 (“Applicant’s Agreement”), which is incorporated herein by reference; and

WHEREAS, The County is qualified to receive up to $80,000,000 of SB 863 funds through the SB 863 RFP, which amount would require a matching County contribution of $24,000,000 (“County’s Cash Contribution”); and

WHEREAS, Under budgets adopted by this Board of Supervisors for Fiscal Years 2012 through 2015, $10,190,000 was appropriated to the County’s Sheriff’s Department through the
capital budget for replacement of County Jail No. 3 and County Jail No. 4, which amount
could be used towards County’s Cash Contribution; and

WHEREAS, If the County receives a conditional intent to award SB 863 financing for
the Proposed Facility (a “Notice of Funding Intent”), City staff will submit legislation authorizing
the use of $13,810,000 of commercial paper for the Proposed Facility to this Board of
Supervisors for consideration within 30 days of receiving the Notice of Funding Intent from the
BSCC; and

WHEREAS, The submitted application for SB 863 financing must include a resolution
that is adopted by this Board of Supervisors that provides assurance that County’s Cash
Contribution will be lawfully available for the Proposed Facility, and a July 7, 2015 letter from
the County’s Controller confirms $10,190,000 has been appropriated for the Proposed Facility
and is duly authorized and lawfully available, which letter is on file with the Clerk of the Board
of Supervisors in File No. 150701 and is incorporated herein by reference; and

WHEREAS, The submitted application for SB 863 financing must include a resolution
that is adopted by this Board of Supervisors that authorizes the execution of a Project Delivery
and Construction Agreement, a BSCC Jail Construction Agreement, and a Right of Entry for
Construction and Operation (collectively, “Construction Documents”), and a Ground Lease,
Facility Lease, and a Facility Sublease (collectively, the “Financing Documents”), which are
substantially the forms on file with the Clerk of the Board of Supervisors in File No. 150701,
and the Construction Documents and the Financing Documents are hereby declared to be a
part of this resolution as if set forth fully herein; and

WHEREAS, The SB 863 RFP specifies that any county applying for SB 863 financing
must designate the construction administrator for the Proposed Facility, and County’s
construction administrator for the Proposed Facility will be Jumoke Akin-Taylor, Project
Manager for San Francisco Public Works (SFPW), Building Design & Construction (BDC) - Project Management, or any other person designated by the Director of SFPW; and

WHEREAS, The SB 863 RFP specifies that any county applying for SB 863 financing must designate the financial officer for the Proposed Facility, and County’s financial officers for the Proposed Facility will be Bree Mawhorter, Chief Financial Officer of County’s Sheriff’s Department, or any other person designated by the County’s Sheriff, and Jumoke Akin-Taylor, Project Manager for San Francisco Public Works (SFPW), Building Design & Construction (BDC) - Project Management, or any other person designated by the Director of SFPW; and

WHEREAS, The SB 863 RFP specifies that any county applying for SB 863 financing must designate the project contact person for the Proposed Facility, and County’s project contact persons for the Proposed Facility will be Jumoke Akin-Taylor, Project Manager for SFPW, Building Design & Construction (BDC) - Project Management, or any other person designated by the Director of SFPW, and Bree Mawhorter, Sheriff’s Department, or any other person designated by the County’s Sheriff; and

WHEREAS, The submitted application for SB 863 financing must include a resolution adopted by this Board of Supervisors that provides assurance the County will fully and safely staff and operate the Proposed Facility within 90 days after completion of construction; and

WHEREAS, The SB 863 RFP specifies that any county applying for SB 863 financing must have fee ownership or a long-term lease of the real property required for the Proposed Facility within 90 days of receiving a Notice of Funding Intent from the BSCC, and such real property is currently owned by third parties (the “Acquisition Parcels”); and

WHEREAS, The Planning Department prepared a Draft Initial Study/Mitigated Negative Declaration ("IS/MND") for the Proposed Facility and published it for public review on May 13, 2015; and
WHEREAS, The Draft IS/MND was available for public comment until June 3, 2015;

and

WHEREAS, On June 25, 2015, the Planning Commission reviewed and considered the Final Mitigated Negative Declaration ("FMND") and found that the contents of said report and the procedures through which the FMND was prepared, publicized, and reviewed complied with the California Environmental Quality Act (California Public Resources Code, Sections 21000, et seq.) ("CEQA"), 14 California Code of Regulations, Sections 15000, et seq. (the "CEQA Guidelines") and Chapter 31 of the San Francisco Administrative Code ("Chapter 31"); and

WHEREAS, The Planning Commission found the FMND was adequate, accurate and objective, reflected the independent analysis and judgment of the Department of City Planning and the Planning Commission, and that the summary of comments and responses contained no significant revisions to the Preliminary IS/MND, and approved the FMND for the Proposed Facility in compliance with CEQA, the CEQA Guidelines and Chapter 31; and

WHEREAS, The Planning Department, Jonas Ionin, is the custodian of records, located in File No. 2014.0198E, at 1650 Mission Street, Fourth Floor, San Francisco, California; and

WHEREAS, Planning Department staff prepared a Mitigation Monitoring and Reporting program ("MMRP"), which material was made available to the public and this Board of Supervisors for this Board’s review, consideration and action; and

WHEREAS, This Board of Supervisors held a public hearing on the FMND on July 10, 2015, and upheld and affirmed the FMND and found that the FMND was adequate, accurate and objective, reflected the independent analysis and judgment of the City, and that the summary of comments and responses contained no significant revisions to the Preliminary IS/MND, and approved the FMND for the Proposed Facility in compliance with CEQA, the
CEQA Guidelines and Chapter 31 in Board of Supervisors Motion No. M15-120; now therefore be it

RESOLVED, That this Board of Supervisors has reviewed and considered the FMND and the record as a whole, finds that the FMND is adequate for its use as the decision-making body for the Proposed Facility, that there is no substantial evidence that the Proposed Facility will have a significant effect on the environment with the adoption of the mitigation measures contained in the MMRP to avoid potentially significant environmental effects associated with the Proposed Facility, and hereby adopts the FMND; and, be it

FURTHER RESOLVED, That the Board of Supervisors hereby adopts the MMRP attached hereto as Exhibit A and incorporated herein as part of this Resolution by this reference thereto and commits to all required mitigation measures identified in the FMND and contained in the MMRP; and, be it

FURTHER RESOLVED, The County is authorized to submit an application for $80,000,000 of SB 863 funds in response to the SB 863 RFP; and, be it

FURTHER RESOLVED, The Director of SFPW is authorized to execute and submit the Applicant’s Agreement to the BSCC; and, be it

FURTHER RESOLVED, That within the 30 day period following County’s receipt of the Notice of Funding Intent from BSCC, City staff shall submit legislation authorizing the appropriation of $13,810,000 of commercial paper to fund the remainder of County’s Cash Contribution to this Board of Supervisors for consideration; and, be it

FURTHER RESOLVED, The County’s Cash Contribution shall be compatible with the lease revenue financing that funds the SB 863 funds awarded to County for the Proposed Facility; and, be it

FURTHER RESOLVED, The County will be authorized to proceed with the Proposed Facility if County is awarded and accepts the SB 863 financing for the Proposed Facility, the
County acquires the Acquisition Parcels and obtains sufficient funding for the development and construction of the Proposed Facility, and this Board of Supervisors approves the contract for the design of the Proposed Facility and the contract for the construction of the Proposed Facility (the “Acceptance Conditions”); and, be it

FURTHER RESOLVED, This Board of Supervisors does hereby approve the form of the Construction Documents and the Financing Documents, as may be modified by mutual agreement of County and BSCC to allow a portion of the Proposed Facility to be encumbered with the Financing Documents for the SB 863 funds awarded for the Proposed Facility and a portion of the Proposed Facility to be encumbered with the financing documents related to the issuance of County's General Fund certificates of participation for the Proposed Facility; and, be it

FURTHER RESOLVED, If the Acceptance Conditions are fully satisfied, the following persons (collectively, the “Authorized Officers”), will be authorized to execute the Construction Documents and the Financing Documents as specified below for and in the name of the County at such time and in such manner as is required for the awarded SB 863 financing, modified as may be necessary for a design-build project, with such additions thereto and changes therein as are required by the BSCC or the SPWB to effectuate the financing program for the SB 863 financing and as condition to the issuance of the Bonds, if the applicable Authorized Officers, determine, in consultation with the County’s City Attorney, such changes are in the best interest of the County, do not materially increase the obligations or liabilities of the County, are necessary or advisable to effectuate the purposes of the Construction Documents, the Financing Documents or this Resolution, and are in compliance with all applicable laws, including the County’s Charter, and approval of such changes shall be conclusively evidenced by the execution and delivery thereof by the applicable Authorized Officers, with (i) County’s Director of Property or his or her designee, acting alone, authorized
to sign the Financing Documents, (ii) County’s Director of Property or his or her designee, authorized to sign the Right of Entry for Construction and Operation and the Facilities Sublease on behalf of the County, (iii) County’s Controller or his or her designee, County’s Sheriff or his or her designee, and the Director of SFPW or his or her designee, acting together, authorized to sign the BSCC Jail Construction Agreement, and (iv) County’s Controller or his or her designee, and County’s Sheriff or his or her designee, acting together and with the recommendation of the Director of SFPW or his or her designee, authorized to sign the Project Delivery and Construction Agreement; and, be it

FURTHER RESOLVED, That if the County is awarded financing of SB 863 funds and the Acceptance Conditions are fully satisfied, the County shall (i) adhere to state requirements and terms of agreement between the County, the BSCC, and the SPWB in the expenditure of such financing and the County’s Cash Contribution, and (ii) safely staff and operate the Proposed Facility, should it be constructed, within 90 days after substantial completion of construction of the Proposed Facility, and (iii) for so long as the SPWB lease-revenue bonds secured by the Financing Documents remain outstanding, not dispose of, modify the use of, or change the terms of the real property title or other interest in the site needed to construct the Proposed Facility, or lease housing capacity in the Proposed Facility subject to the Financing Documents to any other public or private entity without permission and instructions for such action from the BSCC for a period of ten years beyond the completion of construction of the Proposed Facility.
RECOMMENDED BY:

Mohammed Nuru, Director of Public Works
Resolution authorizing the Sheriff's Department to submit a funding application to the Board of State and Community Corrections pursuant to California State Senate Bill 863 (2014) for a proposed project to replace County Jail No. 3 and County Jail No. 4; outlining the cash contribution funds for the proposed project; conditionally approving the form and execution of associated financing and construction documents; and adopting a Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program.
